APPENDIX A 439

PREFACE

The Nevada Statistical Abstract is required under Nevada Revised Statute (NRS 345.090) to be published each biennium. The 1986 edition provides a comprehensive compendium of statistical data about the Silver State, its people, economy, environment and government.

Each table in this document has been carefully designed for clarity and ease of comprehension. The reader should pay particular attention to the technical notes at the beginning of each section for definitions of specialized terms and to all footnotes on the individual tables.

The reader should be aware that the narrative at the beginning of each section is not intended to be a definitive statement on the particular subject at hand, nor should it be construed to represent official state policy. Rather the narrative is simply an independent analysis of the data and is solely the opinion of the authors.

It is impossible to compile and publish a document such as the Nevada Statistical Abstract without the cooperation and assistance of numerous persons in both the public and private sector. To those who have generously given their time and effort to provide the information contained within this document, the authors of this document send out their deep-felt thanks. And special thanks to Lori Letizia for her efforts in managing the word processing of the document.

The refinements of this edition over the previous edition published by the Nevada Office of Community Services are a direct result of comments and suggestions from the users of this document. We continue to solicit your comments. All suggestions and ideas will be reviewed and considered for future editions.

Population Growth in Western States (1980, 1985) 44

POPULATION

In the years 1970 to 1980, Nevada's population increased from 488,000 to over 800,000 for a net gain of 311,000 new residents. During the decade, the state had the fastest growth rate in the nation at 63.8 percent.

The state's strong growth rate has continued into the 1980s showing a 17 percent growth rate between 1980 and 1985 (according to the U.S. Bureau of the Census). This ranked Nevada 3rd in the nation in growth rate, trailing only Alaska and Arizona. Despite the high growth rate, however, Nevada is one of the least densely settled states in the country with only seven persons per square mile.

In general, Nevada's strong population growth has largely been spurred by new residents moving into the state rather than by internal growth (i.e. a large number of births). Currently, new residents moving into the state outnumber those born in the state by over a four to one margin. In fact, Nevada has the lowest percentage of native born residents of all states as only 21.4 percent of the population living in the State in 1980 were actually born here.

Nevada's population is primarily concentrated in two urban areas located at opposite ends of the state. The Clark County Metropolitan Statistical Area, located in the southern tip of the state, holds nearly 60 percent of the state's population. The Clark County MSA includes the City of Las Vegas. The Washoe County MSA, located along the northwestern border of state, is smaller, holding approximately 23 percent of the state's population. The Washoe County MSA includes the City of Reno.

While rural Nevada has a smaller population base, there none-theless has been significant growth in several rural counties. Between 1980 and 1985, the counties of Douglas, Elko, Humboldt, Lyon and Nye all showed increases in population near or above 20 percent.

Predictions for future growth in Nevada vary considerably. The National Planning Association has predicted that the state will have 1.262 million residents by the end of the century. The University of Nevada-Reno, Bureau of Business and Economic Research sees growth to approximately 1.422 million. The U.S. Bureau of the Census, on the other hand, has predicted a more robust growth to 1.9 million residents by the year 2000.

Composition of Nevada's Population:

Overall, Nevada's population is rather homogeneous with over 87 percent of the population in 1980 classified as White. Only 6.4 percent of the population was Black, compared to a national figure of 11.7 percent. Nevada's Indians, while having a smaller population than Blacks, ranked among the top 10 states in percent of statewide population with 1.6 percent of Nevada's population being Indian.

Changing patterns in household type and family relationships was evident in Nevada. The percentage of family households (i.e. a married couple without children or a household with children headed by either a married couple or a single parent) declined during the decade. In 1970, family households (regardless of presence of children) comprised 77.4 percent of all households in the state; by 1980 this figure had dropped by 11.2 points to 68.2 percent.

The composition of the family household with children showed a similar change during the 1970s. The percentage of Nevada families with children decreased from 56.3 percent of all family households in 1970 to 50.1 percent of all family households in 1980. Furthermore, of these family households with children, the percentage headed by single parents increased dramatically. In 1970, only 13.8 percent, or two out of fifteen families with children were headed by single parents. By 1980, the percentage had increased to 22.5 percent, or two families out of nine. This change paralleled national trends. It is notable that single parent households in Nevada grew at twice the rate of all other family households in the state.

In 1980, Nevada had the highest percentage of households in the nation classified as non-family. Non-family households also comprised the fastest growing segment of the state's population between 1970 and 1980. Conversely, married couple families with children was the slowest growing household type in the state during this same period. If one considers the traditional American household to be a married couple with children, then only one fourth of all households in Nevada could be considered to be "traditional families." Nationally, slightly less than one third of all households could be considered "traditional" by this definition.

Nearly 60 percent of all persons living in the state in 1980 either lived alone or lived with one other person. This helps account for the fact that Nevada had the lowest number of persons per household in the country, and the second lowest number of persons per family. Additionally, the Census reports that the number of households in Nevada grew from 304,000 in 1980 to 375,000 in 1984, faster than the rate of population growth for this same period. This indicates that household size and family size is continuing to decline.

Nevada had one of the lowest percentages of persons 65 and over. In 1980, only 8.5 percent of the state's population was 65 or over compared to 11.3 percent for the nation. This ranked the state 45 among the 50 states. In the past five years, however, this segment of the population has grown faster than any other age group in the state. The "65 and over" age group has increased by over seven percent annually. This ranks Nevada's senior population as the second fastest growing in the nation. Interestingly, the other age group showing considerable growth during the past five years is children under the age of five years. This group increased by an average of six percent annually. The age groups 5-17 and 18-24 grew less than one percent annually.

Other numbers of note show that 15.4 percent of all persons in Nevada held veteran status, the highest percentage in the nation. Nevada had the lowest percentage of church adherents, only 29.1 percent belong to churches. Nationally, nearly 50 percent of all persons belong to a church.

TECHNICAL NOTES

Race - Information on race was obtained through self-identification; therefore, the data represent self-classification by people according to the race with which they identify themselves.

The category "White" includes persons who indicated their race as White, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but entered a response suggesting European origin such as German, Danish or Polish.

The category "Black" includes persons who indicated their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but reported entries such as Jamaican, Black Puerto Rican, West Indian, Haitian or Nigerian.

The category "American Indian, Eskimo, and Aleut" includes persons who classified themselves as such in one of the specific race categories.

The category "Asian and Pacific Islander" includes persons who indicated their race as Japanese, Chinese, Filipino, Korean, Asian, Indian, Vietnamese, Hawaiian, Guamanian or Samoan.

The category "Other" includes Asian and Pacific Islander groups not identified separately (e.g. Cambodian, Indochinese, Pakistani, Indonesian, Fiji Islander) and other races not in-included in the specific categories listed on the questionnaire.

Spanish Origin - Persons of Spanish origin or descent are those who classified themselves in one of the specific Spanish origin categories listed on the questionnaire (Mexican, Puerto Rican or Cuban) as well as those who indicated that they were of other Spanish/Hispanic origin. Persons of Spanish origin may be of any race.

Urban-Rural Residence - The determination of urban-rural residence is made after Census results have been tabulated. Geographic areas are classified as urban or rural on the basis of their population size and/or density at the time of the Census.

Urban Population - All persons residing in areas determined to be urbanized areas or in places of 2,500 or more outside urbanized areas.

Rural Population - Population not classified as urban constitutes the rural population.

Metropolitan Statistical Area - A county or group of contiguous counties which contain at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000.

Census Designated Place - These are densely settled population centers without legally defined corporate limits or any other corporate powers or functions. Each has a definite residential nucleus. Boundaries are drawn by the Census Bureau, in cooperation with state and local agencies, to include, in so far as possible, all the closely settled areas. The term "place" as used by the Census Bureau refers to a concentration of population, regardless of the existence of legally prescribed limits, powers or functions.

Incorporated Places - These are political units incorporated as cities and towns where there is a concentration of population with legally defined boundaries and legally constituted governmental functions.

Household - Includes all persons who occupy a housing unit. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements.

Householder - One person in each household is designated as the "householder." In most cases, this is the person, or one of the persons, in whose name the home is owned or rented.

Family Householder - is a householder living with one or more persons related to him or her by birth, marriage or adoption.

Non-Family Householder - is a householder living alone of with non-relatives only.

Unrelated Individual - is (1) a householder living alone or with non-relatives only, (2) a household member who is not related to the householder, or (3) a person living in group quarters who is not an inmate of an institution.

Family Household - Consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage or adoption. All persons in a household who are related to the householder are regarded as members of his or her family. Please note that not all households contain families, because a household may be composed of a group of unrelated persons or one person living alone.

Married-Couple Family - is a family in which the householder and spouse are enumerated as members of the same household.

Own Children - are sons and daughters, including stepchildren and adopted children of the householder who are single (never married) and under 18 years of age.

Data Comparability - Please note that the following tables show two populations for the State of Nevada; 800,493 and 800,508. The 800,493 figure was challenged successfully by Nevada and the Census later adjusted their population count for Nevada to 800,508. Because all the Census documents were already printed, this change is not reflected in the detailed tables.

Population Estimates - Also note that at the end of this section we have chosen to provide the reader with two different sets of current population estimates, those of the U.S. Bureau of the Census and the official estimates of Nevada's counties as prepared for the State of Nevada by the Bureau of Business and Economic Research, University of Nevada-Reno (BBER). The BBER estimates are the "official" state estimates and are required to be used by all state agencies for planning purposes; they are also the estimates used for tax apportionments.

Nevada Urban and Rural Population
1860 to 1980

Year	Total Resident Population	Urban		Rural	
		# of Inhabitants	Percent of Total	# of Inhabitants	Percent of Total
1860	6,857	N/A	N/A	6,857	100.0 %
1870	42,491	7,048	16.6 %	35,443	83.4
1880	62,266	19,353	31.1	42,913	68.9
1890	47,355	16,024	33.8	31,331	66.2
1900	42,335	7,195	17.0	35,140	83.0
1910	81,875	13,367	16.3	68,508	83.7
1920	77,407	15,254	19.7	62,153	80.3
1930	91,058	34,464	37.8	56,564	62.2
1940	110,247	43,291	39.3	66,956	60.7
1950	160,083	91,625	57.2	68,458	42.8
1960	258,278	200,704	70.4	84,574	29.6
1970	488,738	395,336	80.9	93,402	19.1
1980	800,508	682,833	85.3	117,675	14.7

NOTE: The 1860 population is that of the area taken to form Nevada in 1861. Also, the number of urban and rural inhabitants for 1860-1940 are adjusted to present a consistent series based on the rural/urban definition used from 1950 on.

Population of Cities and Places in Nevada 1970 to 1980

(Continued)

Incorporated Cities and Census Designated Places a)	County Location	Number of Inhabitants		Net Change	Average Annual Percent Change
		1970	1980		
Carlin City	Elko	1,313	1,232	-81	-0.6 %
Wells City	Elko	1,081	1,218	137	1.2
Overton (CDP)	Clark	-	1,111	-	-
Caliente City	Lincoln	916	982	66	0.7
Gabbs City	Nye	874	811	-63	-0.7

a) For a definition of a "Census Designated Place" see the Technical Notes.

b) In 1970 Census publications, the population of North Las Vegas was listed at 36,216. The 1980 Census documents show the North Las Vegas population to be 46,067 for 1970. The apparent discrepancy is related to boundary adjustments made in North Las Vegas between 1970 and 1980.

c) In 1969, Carson City and Ormsby County became Carson City, an independent city.

d) New Washoe City is not an incorporated city.

Graph - Marital Status of Persons 15 Years and Older Living in Nevada (1970-1980) 63

Marital Status of Persons in Nevada 15 Years and Older by Sex and Age (1980) 64

VITAL STATISTICS

The number of resident births in Nevada reached an all time high in 1985 with 15,293 births. Nevada's birth rate per 1,000 population, however, has declined significantly since 1980. In 1985, the state's birth rate dropped to 16.1 per 1,000 residents, down from a rate of 17.1 in 1980. This is similar to national trends which have seen a relatively steady decline in the birth rate.

Nevada had the highest abortion rate in the nation according to one report. An article in "Family Planning Perspective" published by the Alan Guttmacher Institute reported the abortion rate in Nevada for woman 15-44 years old to be 46.0 per 1,000 residents in 1982. Nationally the abortion rate was reported to be 28.8.

Nevada's death rate per 1,000 residents has climbed the past several years to 8.5 in 1985. While Nevada has traditionally had a lower death rate than the nation, the gap has narrowed. In 1985, the national death rate was 8.7. Key to the rise in the death rate in Nevada has been a rise in the rates of heart disease and malignant neoplasms (cancer). Death rates for these two diseases rose to 298.8 and 184.8 per 100,000 population respectively, and are the two leading killers in the state. Despite the rise in the death rate from heart disease, however, Nevadans are far less likely to die from heart disease than their national counterparts. In 1982, the death rate for heart disease in Nevada was only 239.2 per 1,000 compared to 326.0 nationally. Deaths rates for accidents and suicide, on the other hand, were well above national rates as was death caused by cirrhosis of the liver.

In 1980, there were nearly 30,000 more single men in Nevada than there were single women. The number of single people has increased significantly over the past several decades, both in real terms and percent terms. In 1980, 23.9 percent of Nevadans were single compared to only 18.7 percent in 1960. Conversely, only 58.9 percent of Nevadans in 1980 were married compared to a full 70 percent in 1960. It should also be noted that the number of divorced individuals more than doubled during this same period, jumping from only 5.9 percent in 1960 to 12.0 percent in 1980.

TECHNICAL NOTES

Residence Allocation - Vital events in this section are allocated to the place of residence (county) regardless of the place of occurrence. In the case of a birth, residence is the usual county residence of the mother. Deaths are allocated to the county residence of the deceased.

Rates - Rates for Nevada and for Nevada counties in this section were determined using the Official Nevada Population Estimates except in two tables comparing Nevada to Western States. In both of these tables, rates were determined using Census estimates.

Live Births - A birth in which the child shows evidence of life after complete birth. A birth is complete when the child is entirely outside the mother, even if the cord is uncut and placenta still attached. "Evidence of life" includes heart action, breathing or coordinated movement of voluntary muscle.

Fetal Deaths - Means a birth after at least 20 weeks of gestation in which the child shows no evidence of life after complete birth.

Induced Abortions - Means the termination of a human pregnancy with an intention other than to produce a life or to remove a dead fetus.

Marital Status:

Married - Includes those who have been married only once and have never been widowed or divorced, as well as those currently married persons who remarried after having been widowed or divorced. Persons in common-law marriages are also classified as married.

Separated - Those persons living apart because of marital discord, with or without a legal separation.

Divorced - Those persons who have undergone a legal dissolution of a marriage (other than an annulment) and are presently single.

Widowed - A woman who has lost her husband by death or a man who has lost his wife by death, who has not remarried.

Single - All persons who have never been married, and persons whose only marriage has been annulled.

Number of Legal Abortions
and Rate Per 1,000 Women 15-44 Year Old
Nevada vs. Western States
1982

State	Number of Abortions	Abortions Per 1,000 Women 15-44 Years Old		Ratio: Abortions Per 1,000 Live Births	
		Rate	Rank	Rate	Rank
Alaska	1,900	37.9	40	172	44
Arizona	15,800	23.4	25	298	31
California	265,700	44.5	2	617	4
Colorado	25,200	32.2	10	454	14
Hawaii	9,100	37.9	4	484	11
Idaho	3,000	13.4	41	158	45
Montana	4,200	22.5	29	303	30
Nevada	10,000	46.0	1	702	2
New Mexico	7,500	22.8	28	281	33
Oregon	16,400	25.2	20	395	19
Utah	4,200	11.4	47	100	50
Washington	34,100	32.9	8	517	10
Wyoming	4,200	8.4	49	101	49
Western States	398,200	37.9	--	527	--
United States	1,573,900	28.8	--	426	--

NOTE: The number of abortions reported by the Alan Guttmacher Institute (AGI) is typically higher than the number reported elsewhere. The AGI surveys providers of abortions directly. Discrepancies between the resulting estimates are due to differences in the methods of data collection.

Marriage and Divorce Statistics for Nevada and the United States 1950 to 1985

Year	Nevada		Marriage Rate Per 1,000 Population		Divorce Rate Per 1,000 Population	
	Marriages (000s)	Divorces (000s)	Nevada	U.S.	Nevada	U.S.
1950	49.9	8.9	311.5	11.1	55.7	2.6
1955	52.4	9.6	223.1	9.3	39.0	2.3
1960	59.4	8.5	208.1	8.5	29.6	2.2
1965	81.0	10.0	186.7	9.3	23.0	2.5
1966	86.3	9.7	190.2	9.5	21.4	2.5
1967	86.4	9.7	198.2	9.7	22.3	2.6
1968	90.8	10.1	202.1	10.4	22.5	2.9
1969	94.6	11.0	207.1	10.6	24.0	3.2
1970	97.6	9.1	199.7	10.6	18.7	3.5
1971	97.4	9.5	190.4	10.6	18.5	3.7
1972	106.3	11.7	199.6	10.9	21.9	4.0
1973	104.5	10.0	186.9	10.8	17.8	4.3
1974	103.3	10.0	180.3	10.5	17.5	4.6
1975	101.6	10.5	171.6	10.0	17.8	4.8
1976	101.4	10.3	171.2	9.9	16.9	5.0
1977	101.4	10.3	149.6	9.9	15.2	5.0
1978	111.2	11.3	154.6	10.3	15.7	5.1
1979	103.5	11.8	135.2	10.4	15.4	5.3
1980	108.2	13.6	135.2	10.6	17.3	5.2
1981	110.8	14.9	130.0	10.6	17.5	5.3
1982	106.3	13.1	119.9	10.8	14.8	5.1
1983	108.1	13.4	118.5	10.5	14.7	5.0
1984	109.0	13.8	116.3	10.5	14.7	4.9
1985	106.5	13.3	109.2	10.2	13.7	5.0

NOTE: Nevada's high divorce and marriage rates are due to relatively lenient State laws. A large influx of out-of-state people marrying and getting divorced in Nevada, and Nevada's small base population results in disporportionately high statistics.

HOUSING

In the years 1970 to 1980, Nevada's housing stock increased from 171,635 year-round units to 337,491 for a net gain of 165,756 new housing units. During the decade, the growth in housing in Nevada (97.0 percent) was the fastest in the nation.

During this same period, the population living in housing units increased at 64.7 percent, a significantly lower rate than the growth rate of housing units. The apparent lag of population growth in the housing units compared to the growth of occupied housing units was due primarily to changes in household size. In 1980, the average household size was only 2.59, down from 2.98 in 1970. This decrease paralleled the national trend towards smaller household size, as children left the home earlier and families postponed having children or decided not to have them at all. It is also indicative of the work force (i.e. single persons) that is attracted by Nevada's main industry, tourism and gaming. Between 1980 and 1985 the number of households continued to increase at a faster rate than the population, both in Nevada and the nation. These estimates indicate the average household size in Nevada was between 2.40 and 2.50 in 1985.

While household size decreased, and fewer people were occupying more housing units, the number of vacant units still managed to increase. Statewide there were 33,164 vacant units in 1980, nearly triple the number in 1970. Vacancies have continued to climb in the state, at least in the metropolitan areas. According to the Federal Home Bank Board Housing Vacancy Survey, the Cities of Reno, Sparks, Boulder City, Henderson, Las Vegas and North Las Vegas had a combined 36,540 vacant housing units in March of 1986, up from approximately 27,500 in 1980. This same survey shows the vacancy rate climbed from 3.0 percent in Clark County in 1980 to 5.9 percent in 1986 while increasing in Washoe County from 4.5 percent in 1980 to 5.2 percent in 1986.

During the early part of the 1980s, housing starts tapered off somewhat as interest rates climbed to 20 percent and the nation suffered from a recession. In 1983, however, the housing construction market in Nevada apparently turned around as housing unit authorizations nearly doubled, growing from 8,838 in 1982 to 15,093 in 1983. Housing unit authorizations remained above 14,000 in both 1984 and 1985.

The pattern of the type of housing units authorized between 1980 and 1985 indicate a possible change in in the composition of the housing stock in the state. In 1980, there were nearly twice as many single unit structures (not counting mobile homes) on the ground as there were multifamily structures. Between 1980 and 1985, however, housing unit authorizations were split nearly evenly between single-family dwelling units and multifamily dwelling units, indicating a movement towards multifamily units. It should also be noted that Nevada has one of the largest percentages of mobile homes in the nation in its housing stock.

In 1980, mobile homes made up 12.6 percent of the housing stock in Nevada compared to 6.0 percent for the Western States and 5.0 percent for the United States. And mobile homes increased from 42,513 in 1980 to 58,275 in 1985.

In terms of housing cost, Nevada's median value of an owner occupied housing unit was $68,000, slightly below the median value of $71,000 for the western region, but far above $47,000 for the United States. Nevada's median rent was $268 in 1980 compared to $239 in the Western States and $198 for the United States.

Housing costs annually increased nearly four percent faster than the rate of inflation for the period of 1970 through 1980. Compared to other Western States, however, Nevadans fared well. Housing costs in Nevada showed the slowest increase of all Western States. Renters fared well as they hardly lost ground to inflation. Statewide, rents annually increased only two tenths of one percent faster than the rate of inflation during the 1970s.

Home ownership in Nevada showed a slight increase over renter occupied units between 1970 and 1980, growing from 58.5 percent of the total occupied units to 59.6 percent. All counties, with the exception of Washoe County, showed an increase in the percent of owner occupied units. Home ownership for Blacks, however, was less encouraging. While the Black population grew to 6.4 percent of Nevada's population in 1980, Black homeowners occupied only 3.7 percent of owner occupied housing units. In comparison to Whites, whose composition was 61.1 percent owners and 38.9 percent renters, the figures for Blacks were nearly reversed with 41.6 percent being owners and 58.4 percent renters. Other races fared somewhat better with owners/renters nearly split evenly (51.5 percent owner and 49.5 percent renter).

Other statistics show that of people in poverty, renters outnumbered homeowners by nearly a two to one margin. On the other hand, people 65 years and over showed more than twice as many homeowners as renters. Of note, the median income of families owning their own homes in 1979 in Nevada was $22,448, nearly twice the median income of $12,868 for renters.

In Nevada, construction activity reached an all-time high according to F.W. Dodge reports. In 1985, the value of building construction in the state was 1.570 billion dollars. Residential construction accounted for over half the valuation ($819.3 million), followed by nonresidential construction at $430.8 million and non-building construction at $247.9 million.

TECHNICAL NOTES

Household - A household includes all persons who occupy a group of rooms or a single room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied as separate living quarters, that is, when the occupants live and eat separately from other persons in the building and have direct access from the outside of the building or through a common hall. The measure "persons per household" is obtained by dividing the number of persons in households by the number of households.

Housing Units - A housing unit is a house, apartment, group of rooms, or a single room, occupied as separate living quarters, or if vacant, intended for occupancy. Separate living quarters are those in which the occupants live and eat separately from other persons in the building and have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements. Both occupied and vacant housing units are included in the housing inventory, except that tents, boats, vans and the like are included only if they are occupied. Vacant mobile homes are included, provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealer's sales lots, at the factory, or in storage yards are excluded from the housing inventory.

Year-Round Housing Units - All occupied units plus vacant units which are intended for year-round use. Data on housing characteristics are limited to year-round units. Vacant units held for seasonal use or migratory labor are excluded because it is difficult to obtain reliable information for them. Counts of the total housing inventory include such units.

Vacant Housing Unit - A housing unit is vacant if no one is living in it at the time of enumeration, unless occupants are only temporarily absent. New units not yet completed are classified as vacant housing units if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place.

Tenure - A housing unit is "owner-occupied" if the owner or co-owner lives in it even if it is mortgaged or not fully paid for. All other occupied units are classified as "renter-occupied," inincluding units rented for cash rent and those occupied without payment of cash rent.

Value - Value is the respondent's estimate of how much the property (house and lot) or condominium would sell for, if it were for sale. For vacant units, value is the price asked for the property.

Contract Rent - Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. For vacant units, it is the rent asked for the unit at the time of enumeration.

Year Structure Built - "Year structure built" refers to when the building was first constructed, not when it was remodeled, added to, or converted. For a house-boat or mobile home or trailer, the manufacturer's model year is assumed to be the year built.

Heating Equipment - The categories for types of heating equipment are: (1) a steam or hot water system; (2) a central warm-air hot furnace with ducts to the individual rooms; (3) an electric heat pump; (4) other built-in electric units which are permanently installed in the floors, walls, ceilings, or baseboards, and are part of the electrical installation of the building; (5) a floor, wall, or pipeless furnace; (6) room heaters without flue of vent that burn gas, oil, or kerosene; and (8) fireplaces, stoves, or portable room heaters of any kind that can be picked up and moved.

Air Conditioning - "Air conditioning" is defined as the cooling of air by refrigeration unit. It does not include evaporative coolers, fans, or blowers which are not connected to a refrigeration unit; however, it does include heat pumps.

Telephone in Housing Unit - A unit is classified as having a telephone if there is a telephone in the living quarters. Units where the respondent uses a telephone located inside the building but not in the respondent's living quarters are classified as having no telephone.

Fuels Used for House Heating - "Utility gas" is gas piped through underground pipes from a central system that serves the neighborhood. "Bottled, tank, or LP gas" is stored in tanks which are refilled or exchanged when empty. "Fuel oil, kerosene, etc." includes fuel oil kerosene, gasoline, alcohol, and other combustible liquids. "Other fuel" includes any other fuel such as purchased steam, coal dust, briquettes made with pitch and sawdust, waste materials, etc.

Public or Private Water Hookup - A common source supplying water to six or more units is classified as a "Public system or private company." If water is supplied from a well serving five or fewer households, the units are classified as having water supplied by either an individual drilled well or an individual dug well.

Housing Unit Authorizations - Represents the number of housing units that city and county building departments have approved for construction. Not all housing units approved are built in the year of approval, nor are all housing units approved ever built.

Housing Vacancy Rates
Clark and Washoe Counties
1978 to 1986

Year	Clark County			Washoe County		
	Total	Single Family	Multi-Family	Total	Single Family	Multi-Family
1978	2.8%	1.6%	5.1%	2.2%	2.4%	2.5%
1979	2.9	2.8	3.9	3.0	1.9	5.6
1980	3.0	2.3	4.7	4.5	2.3	8.4
1981	2.7	1.9	4.3	2.8	1.6	4.9
1982	3.5	2.2	5.5	2.3	1.4	3.7
1983	4.2	2.5	6.8	2.6	1.4	4.6
1984	5.5	3.5	8.5	3.4	1.5	5.9
1985	6.3	4.0/8.0 a)	9.4	3.1	2.0/4.3 a)	4.8
1986	5.9	3.8/7.6 a)	8.3	5.2	2.7/5.0 a)	9.8

a) In 1985, the Federal Home Loan Bank Board began reporting single family home vacancies in two categories, detached and single. The first number represents detached single family home vacancies, the second represents attached single family vacancies (includes townhouses, row-houses, duplexe, etc.).

EMPLOYMENT

Prior to the 1981-1982 economic recession, Nevada had been virtually immune to the effects of national recessionary periods. The economic downturn, which occurred between July 1981 and November 1982, did, however, slow the rate of growth in Nevada. Between 1979 and 1982, nonagricultural employment increased at an annual rate of only 1.9 percent while unemployment nearly doubled, rising from 5.1 percent to 10.1 percent.

The employment picture in Nevada has brightened considerably in the past couple years, as the state has recovered fully from the effects of the national recession. Since 1982, 35,000 jobs have been added and the unemployment rate in June of 1986 dropped to 6.1 percent, the lowest since April of 1980 when the rate was 5.9 percent.

The recovery of the Nevada economy has been steady if not spectacular. The recovery was hampered by labor disputes in Clark County involving four unions and 17,100 workers with effects of the strike still being felt as late as 1984. Despite the strike, the lingering effects of the recession, the legalization of gaming in New Jersey, and the advent of the State Lottery in neighboring California, Nevada's gaming industry continues to play a major role in the state's economy.

Between 1970 and 1980, the hotel, gaming and recreation employment sector in Nevada experienced the largest growth, rising 116 percent. The Laughlin and Wendover gaming industry expanded rapidly throughout the 1980s, increasing employment and gaming revenues. In 1984, the hotel/gaming/recreation sector provided more jobs than any industry, employing 120,100 persons. No other state in the nation has as large a percentage of its citizens employed in tourism and its related industries as Nevada. The services sector, which includes hotel/gaming/recreation, accounted for 44.0 percent of the work force in Nevada, compared to 22.0 nationwide.

All the growth in Nevada, however, has not been in gaming related businesses. In fact, while gaming was growing at a 4.5 percent rate, new business services rose 41 percent between 1980 and 1984, adding 6,400 jobs into the state. The fastest growing business services segment was computer programming and other software services. This sector grew over 250 percent between the 1st quarter of 1980 and the 1st quarter of 1985, followed by Research and Development Laboratories which grew at 76 percent. It should be noted, however, that the computer programming and other software services sector comprised only a small segment of the total business services sector.

While many people have pointed to the advent of high tech as the next Nevada frontier, figures show that this sector has not yet begun to blossom. Technology-oriented workers are relatively few in number and account for a relatively small proportion of jobs in Nevada. Approximately 2.8 percent of all jobs in Nevada were classified as high tech in 1983 (i.e. high tech is considered to be engineers, life and physical scientists, engineering and science technicians, and computer specialists). One half of these were employed as engineering and science technicians. Similarly, manufacturing accounted for less than five percent of Nevada's work force in 1985, compared to 20.1 percent nationally.

Government, on the other hand, now employs less than 14 percent of the people in Nevada compared to a recent high of over 17.0 percent in 1975. Between 1980 and 1984, employment in government (state and local) in Nevada grew by some 3,800. Despite this relatively large increase, government employment did not grow as fast as the overall population. Thus, in terms of the number of government employees per 10,000 population, Nevada saw a decrease from 501 in 1980 to 481 in 1984. Nevada ranked only 24th in the nation in full-time equivalent government employment per 10,000 population.

While gaming carries the economic clout in the urban counties in Nevada, the rural communities in the State owe much of their success (and occasional bad times) to developments in the minerals industry. Although the 1960's and early part of the 1970's saw Nevada's mining industry escape from the "boom and bust" cycles that had characterized it previously, the late 1970s and early 1980's brought back memories of this earlier cycle. The copper industry that once employed more than 2,000 workers, all but vanished in the late 1970's. Molybdenum typified the boom and bust when 600 workers were employed in Tonopah in 1981 only to see that dwindle to 300 in 1984 and close completely in 1985. Gold mining, on the other hand, has more than picked up the slack of the "bust" industries. Gold mining has increased dramatically, creating 2,500 jobs since 1978. Eight counties in Nevada have more than 10 percent of their work force involved in mining. Of these, both Eureka and Esmeralda rely almost exclusively on mining for employment (71.5 percent and 70.7 percent of the workforce is involved in mining, respectively), while in Lander County, six of ten workers are involved in mining.

TECHNICAL NOTES

Data in this section are presented from a number of sources. In some cases, the sources present information that differs slightly. These statistics may differ in definition, concepts, and methods of measurement, as they serve different purposes. This may make cross comparison of some tables difficult. It should be noted, however, that all individual tables have been constructed from one source. The authors of this Abstract feel that the differences are negligible. We feel the slight inconvenience of not being able to compare all tables is far outweighed by the presentation of additional information that would not have been available otherwise.

The major difference between data presented in those tables derived from the County Business Patterns aggregated by the U.S. Bureau of the Census and those compiled from data provided by the Nevada Employment Security Department, Research Section are attributable to the following factors:

1. Differences in industrial classification that arise because of differences between the concept of an establishment (one location) and of the reporting unit (one or more locations) that is to be classified.

2. Differences in coverage of small non-profit organizations, churches, religious organizations and private schools, both elementary and secondary.

3. Differences in reports submitted by employers to federal and state agencies and differences in methods of processing and adjusting data.

Employment statistics from the Employment Security Research Department are presented for eight basic industrial classifications. Every employer that is registered under the Nevada Unemployment Compensation Law is assigned a four-digit industrial code that is based upon that company's principal business activity. Consequently, employment data are collected and aggregate by the following industrial classifications: mining, construction, manufacturing, trade, transportation/communication/public utilities, services government, and finance/insurance/real estate. These statistics reflect the number of job holders by the employer's county business location.

Labor Force - All people classified as employed or unemployed during the week that includes the twelfth of the month. These data reflect the non-institutional labor force aged 16 years and older.

Civilian Labor Force - All civilians who are classified employed or unemployed during the week that includes the twelfth of the month (excludes military personnel).

Employed Persons - All civilians who worked at least one hour for pay of profit or worked 15 hours or more, unpaid, in a family enterprise or volunteer organization. Persons away from their employment for illness, bad weather, vacation, or labor disputes during this week are counted as employed.

Nonagricultural Employment - Full and part-time wage and salary workers who are employed during the week that includes the twelfth of the month. Not included are armed forces personnel, unpaid family workers, proprietors, self-employed, and workers in private households.

Unemployment - All civilians who are not employed during the week including the twelfth of the month who made specific efforts to find a job within the previous four weeks and who were available for work during the week that includes the twelfth of the month.

Unemployment Rates - Total number of unemployed people as a percent of the civilian labor force.

Wholesale Trade - Wholesale trade has now been divided into two major groups: 1) durable goods; and 2) nondurable goods. The types of wholesale trades are: merchant wholesalers, manufacturers' sales branches and sales office establishments, refining and mining companies involved in marketing their products for wholesale; merchandise agents and brokers whose operators are in business for themselves and are primarily engaged in selling or buying goods for others.

Retail Trade - Retail trade covers places selling directly to personal and household users, but not industrial users.

F.I.R.E. - Finance, Insurance and Real Estate

T.C.P.U. - Transportation and Public Utilities

Full-Time Equivalent Employment (FTE) - A computed statistic representing the number of full-time employees that could have been employed at the same payroll cost if all personnel were engaged on a full-time basis at the average monthly pay applying to full-time workers.

Total Annual Payroll - Is the combined amount of wages paid, tips reported, and other compensation including salaries, vacation allowances, bonuses, commissions, sick leave pay, and the value of payments in kind (such as free meals and lodging) paid to employees before deductions for social security, income tax, insurance, union dues, etc.

Average Weekly Hours and Earnings - Is based on information that is collected from payroll records by the Bureau of Labor Statistics in cooperation with the Nevada Department of Employment Security.

Mid-March Employment - Is the count of employees during the pay period that includes March 12th.

Work Disability - Persons were identified as having a work disability if they had a health condition which had lasted six or more months and which limited the kind or amount of work they could do at a job. Persons with a work disability were further classified as "prevented from working" or "not prevented from working." Persons are considered limited in the kind or amount of work they could do if they are unable to work a full-time job.

INCOME

During the late 1970s and early 1980s, the nation witnessed a steady rise in the rate of inflation. In 1976, the rate of inflation stood at 5.8 percent. By 1979, inflation had reached double digit proportions and remained there for three consecutive years. Inflation began to edge downward in 1982, and during the past three years, inflation has registered slightly less than a 3.7 percent average annual growth.

Despite the relatively low rate of inflation during the past few years, however, Americans have not yet fully recovered from the double digit inflation of the late 1970s. While the nation's per capita personal income increased from $9,025 in 1979 to $13,867 in 1985, adjustments for inflation show the effective buying power of Americans increased only slightly. Factoring out the increase due to inflation, the per capita income of $13,867 in 1985 is equivalent to only $9,360 in 1979 dollars. Thus, with the adjustment for inflation, per capita personal income for the nation increased by only $335, or 3.7 percent.

In Nevada, per capita personal income data was less encouraging. Although Nevadans have, for a number of years, enjoyed a per capita personal income much higher than the nation, their income did not keep pace with inflation between 1979 and 1985. While per capita income in the state rose 39.4 percent (from $10,396 in 1979 to $14,488 in 1985), the Consumer Price Index rose 48.2 percent. Thus, after adjusting for inflation, the average Nevadan saw his buying power decline by approximately three percent, or almost $330 dollars during this period. It should be noted, however, that the dollars lost to inflation were lost between 1979 and 1982 when the state was suffering the effects from the national recession. Since 1982, per capita personal income in Nevada has gained, though only slightly, on the rate of inflation.

As mentioned previously, Nevada's per capita personal income has, for a number of years, ranked above the national average. In 1979, Nevada had the fourth highest per capita personal income in the nation. Per capita income statistics for the following years present a somewhat mixed picture. While per capita income in Nevada remains above the national figures, Nevada has lost ground to other states. Nevada ranked fifth in the nation for 1980 and 1981, slipped to ninth in 1982 and 1983, and ended up eleventh and twelve in the nation in 1984 and 1985 respectively. Despite this slippage, however, Nevada was still a healthy five percentage points higher than the national per capita income in 1985.

Median family income was also out-paced by inflation in both Nevada and the country as a whole. Median family income (adjusted for inflation) declined some 11.3 percent in Nevada and declined some 8.1 percent in the nation. In current 1986 dollars, Nevada's families had a median income of $28,400. The median income for all families in the nation was $27,500.

As should be expected from the employment mix in Nevada, persons employed in the "services sector" produced over 40 percent of wages earned. Comparatively, services accounted for only 20 percent of the wages for the nation. On the other hand, Nevadans earn only 5.6 percent of their wages from "manufacturing" while the nation earns four times as much (23.8 percent) from this sector.

In Nevada, mining is a major economic force in the non-metropolitan counties (i.e. all counties with the exception of Clark and Washoe). In 1984, according to the Bureau of Economic Analysis of the U.S. Department of Commerce, mining accounted for ten percent of the direct wages paid in rural Nevada. Statewide, mining was less important with only two percent of wages coming from this sector. There were no other major areas of difference in earnings between the rural and urban portions of the state.

TECHNICAL NOTES

The personal income data presented in this section is from information provided by the U.S. Department of Commerce, Bureau of Economic Analysis (BEA). Most of the actual data was taken from the BEA's Regional Economic Information System. The bulk of the tables in this section were constructed from information released by the BEA in April of 1986. In August of 1986, the BEA released their revised estimates of personal and per capita income for states. They do not, however, release revised data for county information in August. Thus, the reader will find some discrepancies in the tables presented in this section. Where possible, the tables were updated to reflect the revised August 1986 release. County data for the state, earnings by place of work and transfer payments to individuals and non-profit institutions, however, could not be updated. Despite the fact that some tables in this section are not cross-comparable, the authors of this document feel this section presents the best information available at the time of publication.

Personal Income - The personal income of an area is the income received by, or on behalf of, all the residents of that area. Personal income consists of the income received by persons from all sources; from participation in production, from transfer payments from government and business, and from government interest. Personal income is derived as the sum of wage and salary disbursement, other labor income, proprietor's income with inventory valuation and capital consumption adjustments, personal dividend income, personal interest income, rental income of persons with capital consumption adjustment, and transfer payments, less personal contributions for social insurance.

Place of Measurement - In this section, income may be recorded either by place of work (where earned) or by place of residence (where received). Personal income, by definition, is a measure of income received and, thus, is reported by place of residence.

Per Capita Personal Income - The measure of income of the residents of a given area divided by the resident population of the area. Per capita personal income is the mean income computed for every man, woman and child in a particular geographic area.

Wage and Salary Disbursement - The monetary remuneration of employees, including compensation of corporate officers, commissions, tips and bonuses; and pay-in-kind that represents income to the recipient.

Proprietors' Income - The income, including income-in-kind, of proprietorships and partnerships (business) and of tax-exempt cooperatives. It is treated entirely as received by individuals. Interest and dividends received by proprietors of non-financial businesses and rental income received by persons who are not primarily engaged in the real estate business are excluded; they are included in personal interest income, personal dividend income, and rental income of persons, respectively. "Farm proprietor's income" is the total gross income for all farm operators minus total production expenses.

Dividends, Interest and Rent - "Dividends" are payments in cash or in other assets, excluding stock, by corporation, organized for profit, to non-corporate stockholders who are U.S. citizens. "Interest" is the monetary and computed interest income received by persons from all sources. "Rental Income" is the monetary value received by persons (except those primarily engaged in the real estate business) from the rental of real property, royalties received from patents, copyrights and rights to natural resources.

Transfer Payments - Transfer payments are income payments to persons, generally in monetary form, for which they do not render current services. This includes payments by government and business to individuals and non-profit agencies.

Total Earnings by Place of Work - Consists of wage and salary disbursements plus other labor income plus proprietors' income.

Other Labor Income - Consists primarily of employer contributions to private pension and welfare funds, including privately insured workers' compensation funds.

Inflation - The persistent upward movement in the level of prices, resulting in a decline of purchasing power. Inflation can occur when the demand for goods and services exceeds the supply of the goods and services, or when there is an increase in the amount of money in circulation, resulting in a fall in its value and a rise in prices.

Consumer Price Index - The rate of inflation is generally measured by the change in the Consumer Price Index (CPI) expressed as a percentage. The CPI measures the price change of a constant market basket of goods and services over time. During periods of rising prices, the CPI is an index of inflation. The CPI is also used in an analytical context as a deflator to other economic series to adjust these series into inflation-free dollars. The resulting product is also known as the "real," "constant," or "deflated" dollar. When adjustments in living costs are accounted for, real income will actually be less. This decreases consumer purchasing power. This same principle also applies to business and government related finance.

Median Income - The amount which divides the distribution of income into two equal groups, one having incomes above the median and the other having incomes below the median. The median, which is not affected greatly by extreme values, is generally considered a better measure than mean (such as per capita income) with areas of small population base.

T. C. P. U. - Transportation, Communications, and Public Utilities.

F. I. R. E. - Finance, Insurance, and Real Estate.

EDUCATION

Enrollments in the nation's public school system declined over the past ten years as family size decreased and many married couples either deferred having children until they were older, or decided against having children all together. Overall, enrollments in the nation's public schools decreased by 9.4 percent between school years 1975-76 and 1985-86. Nevada, on the other hand, witnessed an overall one percent annual growth in enrollment during this same period.

Nevada's public schools saw only two years of declining enrollment, and that occurred in consecutive school years 1981-82 and and 1983-84. Between school years 1984-85 and 1985-86, however, enrollments increased by some 2.2 percent. Leading this was an increase of 7.6 percent in the kindergarten grade, followed by a 4.0 percent increase in the elementary school grades. Enrollment in the secondary grades decreased by 0.4 percent. The strong growth in lower grades is consistent with population estimates produced by the U.S. Bureau of the Census. The Census estimates that children under five years old grew by some 25.2 percent in Nevada between 1980 and 1984, or nearly twice as fast as the overall population growth in the state.

While the growth in the number of students statewide has been fairly consistent, the distribution of this growth has fluctuated rather dramatically among the state's seventeen counties. In the rural counties, enrollment changes between school years 1978-79 and 1985-86 paralleled changes in population growth and the relative strength of the local economies. Some of the smaller counties, most notably Lincoln, Mineral, Pershing and White Pine have shown decreases in enrollment. Three of Nevada's medium sized counties, Douglas, Elko and Lyon, all showed relatively strong growth with increases in enrollments of 21.0 percent, 15.1 percent, and 32.0 percent, respectively. Clark County showed the largest increase in the number students, picking up an additional 5,235 students during this period for a 6.1 percent increase, while Washoe County public schools increased by only 577 students, a gain of but 1.8 percent.

There were approximately 22.5 students per certified teacher in the public schools in school year 1985-86. The larger school districts generally averaged over 20 students per teacher, while the smaller rural school districts averaged less than 20 students in a classroom. Nevada had a comparatively large ratio of students per teaching personnel (20.0) when compared to the nation (18.1). Although considered a high number, the ratio of students to teaching personnel has declined steadily over the past ten years.

Nevada college-bound students have out-performed their counterparts in other parts of the nation on the SAT college entrance examination over the last decade. The average exam performance of Nevada students on the ACT college entrance exam has equaled the national average over the last five years. Nevada students must pass the Nevada Proficiency Exam in order to graduate from high school. Considered a test of basic skills in reading, writing and mathematics, this test has been passed by Nevada students at a very high rate.

The average salary of teachers and non-teaching personnel has increased steadily over the last 15 years. In school year 1985-86, the average salary of teaching personnel was $25,606, a 13.7 percent increase over 1984-85. When measured against the rate of inflation, however, both teaching and non-teaching have not fared well with their salary increases. The average teacher actually lost $307 in effective buying power to inflation between 1970 and 1985, while non-teaching personnel lost $588 to inflation during the same period. It should be noted that during the same period (1970-1985), median family income statewide lost some $500 to inflation, so education professionals suffered no worse than the general population.

Of the total expenditures for public education in school year 1985-86, local sources contributed 55.3 percent, state sources contributed 40.7 percent and federal sources contributed 4.0 percent to the costs incurred in providing instruction and other services to Nevada students. Per pupil expenditures have increased from $1071.48 in school year 1969-70 to $3826.60 in school year 1985-86, an increase of over 250 percent. Against inflation, however, per pupil expenditures increased by only 8.7 percent. There was a relatively large difference in per pupil expenditures between the rural and urban school districts as economies of scale come into play. Clark County and Washoe County School Districts spent $3618.40 and $3776.22 per pupil, respectively, while Esmeralda, Eureka and Humboldt Counties had the highest per pupil expenditures at $6229.91, $9521.02 and $8929.92, respectively.

In the school year 1985-86, only 8,535 students, or 5.2 percent of all Nevada students, were in private schools. Comparatively, 12.8 percent of all students in the nation attend private schools. It should be noted, however, that private school enrollments in Nevada have been steadily increasing, growing from 3.7 percent of total school enrollment in 1970-71 to a high of 5.3 percent in 1984-85.

Enrollments in Nevada's University System during the past seven years (school years 1979-80 - 1985-86) have shown a healthy increase of 18.3 percent in full-time equivalent students (FTE). The combined enrollments of Nevada's Community Colleges led the growth with a 26.2 percent increase, followed closely by the University of Nevada-Las Vegas at 23.6 percent. The University of Nevada-Reno grew at a more modest rate of 6.1 percent during the same period. The combined FTE enrollments of Nevada's Community Colleges accounted for 34.6 percent of the total students enrolled in the University of Nevada System. More students are enrolled in community colleges than either UNR or UNLV.

TECHNICAL NOTES

Enrollment - The number of registered students in elementary, secondary and ungraded public and private schools as well as community colleges and universities.

Elementary - Kindergarten through grade 6 students enrolled in public or private schools.

Secondary - Grades 7 through 12 students enrolled in public or private schools.

Ungraded - Students, generally classified into special education categories, who are not assigned to a particular grade level.

Special Education - Specialized instruction provided to students of all grades as needed, according to the assessment of a certified school psychologist.

Teaching Personnel - Personnel who are certified to provide instruction to students in the classroom.

Non-Teaching Personnel - Personnel who do not provide instruction in the classroom.

Certified Personnel - Teachers and other educational personnel employed by local school districts who hold valid elementary, secondary and/or special certificates granted by the Superintendent of Public Education.

Non-Certified School District Personnel - Individuals employed by local school districts who are not required to hold valid Nevada certificates.

Pupil and School Service Personnel - Individuals who hold valid Nevada certificates but do not provide instruction in the classroom (i.e. librarians and counselors).

HEALTH CARE

Between 1975 and 1985, employment in the medical and health services sector rose by 165 percent. Medical and health services now provide four percent of the state's total industrial employment compared to only two percent in 1975. During this ten year period, nearly 14,000 new jobs were added in the medical and health services sector.

Between 1975 and 1985, the number of medical and health services firms also doubled, increasing from 821 in 1975 to 1,679 in 1985. Physicians offices showed the greatest increase, as more than 400 new physicians offices were opened. "Other Practitioners" showed the greatest percentage increase, as the number of firms in this sector more than tripled over the decade.

Statistics on employment growth indicate that in every sector in medical and health services, with the exception of medical laboratories, employment more than doubled between 1975 and 1985. Hospitals created more than half of the new jobs (7,260), followed by physicians offices and nursing facilities with 2,028 and 1,230 new positions respectively.

As with employment, hospital costs have increased dramatically in the past ten years. In 1975, the average cost of a stay in a Nevada hospital was approximately $1,200. By 1984, the cost had risen to over $5,500, a near five fold increase. Factoring out the rise in cost due to inflation, the cost of a hospital stay in 1984, adjusted to 1975 dollars, was still nearly $3,000. And the average cost of a stay increased despite a decrease in the average length of a stay from 6.5 days in 1974 to 6.1 days in 1984.

Nevada's cost per hospital stay in 1984 was the most expensive in the nation and was fully $500 more than the cost of a stay in the second ranked state, neighboring California. Nevada's cost per stay was also some $2,000 higher than the average cost per stay for the nation as a whole.

Nevada hospitals also had the second highest expenses per patient day, trailing only Alaska. Although the reasons for this are unclear, they may be related to the fact that the high fixed costs of medical care must be shared by the state's relatively small population base. Higher hospital costs may also be related to the higher number of empty beds hospitals in the state have been carrying. In 1984, only two other states in the nation had a lower occupancy rate than Nevada.

Another factor that has been mentioned as a reason for Nevada's higher hospital costs is the higher percentage of for-profit beds in Nevada. In 1984, more than 40 percent of the hospital beds in Nevada were located in for-profit hospitals compared to less than ten percent nationwide. This was the highest percentage in the nation. For-profit hospitals also carry the highest cost per stay in Nevada. Inpatient expenses of for-profit hospitals in Nevada show an average adjusted cost of $4,283 per admission, followed by government hospitals at $3,486 and non-government non-profit hospitals at $3,385. When these hospitals are compared nationally to hospitals in their respective classes, however, all three hospital types show a relatively higher cost per stay; for-profit hospitals in Nevada ranked fifth highest in costs, non-government non-profit hospitals ranked seventh, and state and local government hospitals ranked twelfth.

It should be noted that while state and local government hospitals did rank high in costs, most of these beds (with the exception of Washoe Medical Center and the University Medical Center) were located in rural Nevada where health care delivery can be more expensive. Almost all of the for-profit hospitals were located in either Washoe County or Clark County, the population centers of the state.

Nevada hospitals also ranked first in gross revenues collected, and showed the largest difference between revenue collected and hospital expenses (commonly referred to as profit). Nevada hospital profits of $42.61 per patient day in 1984 was more than double that of the second highest state, Utah. This large margin occurred despite the fact that Utah's average per diem charges and revenues were substantially below those of Nevada.

Nevada also had the second highest shortfall of revenue collected versus hospital charges. In essence, nearly one-quarter of all hospital charges in Nevada went uncollected. Although data does not indicate why this large uncollected debt exists, it probably can be assumed that a relationship exists between high hospital charges and these lost revenues.

Labor expenses in Nevada hospitals calculated as a percent of total expenses increased from 48.8 percent in 1979 to 51.2 percent in 1984. In spite of this increase, however, Nevada hospitals appear to be keeping their labor expenses down. Of the thirteen western states, only Arizona had a lower labor expense than Nevada. Nationally, the labor component of expenditures was 56.1 percent compared to Nevada's lower 51.2 percent.

During the past ten years, the number of hospital beds in the state grew at a modest rate of 33.8 percent. As population grew at a much faster rate than this, the number of beds per 1,000 population actually decreased from 3.92 to 3.57. Despite the lower number of beds per 1,000 population, however, the occupancy rate in 1984, as mentioned previously, was only 58.7 percent, down nearly ten points from 1975's rate of 68.2 percent. Nevada's occupancy rate in 1984 was the third lowest in the nation. Apparently Nevadans are less likely to admit themselves into the hospital. The number of admissions per 1,000 population in Nevada in 1984 was only 124.7, down from 149.8 in 1975. Only eight states showed fewer people admitting themselves to hospitals.

TECHNICAL NOTES

The American Hospital Association annually produces Hospital Statistics, a publication containing statistical information on all community hospitals in the United States. The majority of tables in this section have been developed using information from this publication.

Community Hospitals - All federal short-term general and other special hospitals, excluding hospital units of institutions, whose facilities and services are available to the public.

Non-Community Hospitals - Includes federal hospitals, long-term hospitals, hospital units of institutions, psychiatric hospitals, hospitals for tuberculosis and other respiratory diseases, chronic disease hospitals, institutions for the mentally retarded, and alcoholism and chemical-dependency hospitals.

Adjusted Average Daily Census - Average number of patients (inpatients plus an equivalent figure for outpatients) receiving care during the reporting period. Derived by dividing the number of inpatient day equivalents (also called "adjusted inpatient days") by the number of days in the reporting period.

Adjusted Expenses Per Admission - Average expense to the hospital in providing care for one inpatient stay. Adjusted expenses are derived by subtracting outpatient expenses from total expenses (see Formula 1 at the end of the Technical Notes). This number, representing inpatient expenses, is divided by total admissions to derive the average expense per hospital stay.

Adjusted Expenses Per Inpatient Day - Expenses incurred for inpatient care only, and derived by dividing total expenses by inpatient day equivalents (adjusted inpatient days). This computation can be further expanded as shown below in Formula 1 at the end of the Technical Notes. The term expenses per adjusted patient day was at times misrepresented to mean the average expenses of two services: A high priced inpatient service and a low-priced out-patient service. Formula 2 shows that this is not the case. Dividing total expenses by the composite figure, which represents inpatient days plus outpatient visits converted into equivalent inpatient days (Formula 1) is exactly equal to the removal from total expenses of that part incurred for outpatient care and then the division of the residual by inpatient days (Formula 2).

Admissions - Number of patients, excluding newborns, accept for inpatient service during the reporting period.

Average Daily Census - Average number of inpatients, excluding newborns, receiving care during reporting period.

Average Length of Stay - Average stay of inpatients during the reporting period. Derived by dividing the number of inpatient days by the number of admissions.

Beds - Average number of beds, cribs and pediatric bassinets regularly maintained (set up and staffed for use) for inpatients during the reporting period.

Expenses - Includes all expenses for the reporting period. Payroll expenses include all salaries and wages, except those paid to medical and dental residents and interns and other trainees. All professional fees and those salary expenditures excluded from payroll are defined as nonpayroll expenses. "Labor-Related Expenses" is defined as payroll expenses plus employee benefits. "Non-Labor-Related Expenses" is all other nonpayroll expenses.

Inpatient Days - Number of adult and pediatric days of care, excluding newborn days of care, rendered during the reporting period.

Inpatient Day Equivalents - An aggregate figure reflecting the number of days of inpatient care, plus an estimate of the volume of outpatient services, expressed in units equivalent to an inpatient day in terms of level of effort.

Outpatient Visits - Visits by patients who are not lodged in the hospital while receiving medical, dental or other services. Each appearance by an outpatient to each unit of the hospital counts as one outpatient visit. A visit consists of one or more occasions of service (each test, examination, treatment or procedure rendered to an outpatient counts as one occasion of service).

Personnel - Number of persons on the hospital payroll as of September of the indicated year. Personnel are recorded in Hospital Statistics as full-time equivalents (FTEs), which are calculated by adding the number of full-time personnel to one-half the number of part-time personnel, excluding medical and dental residents and interns and other trainees. "Per 100 Adjusted Census" indicates the ratio of personnel to adjusted average daily personnel to adjusted average daily census, each on a 100-Census basis.

Revenue - "Gross Patient Revenue" (inpatient and outpatient) consists of revenue from services rendered to patients, including payments received from or on behalf of individual patients. "Net Patient Revenues" consists of gross patient revenue less deductions for contractual adjustments, bad debts, charity and so forth. "Net Total Revenue" consists of net patient revenue plus all other revenue, including contribution, endowment revenue, government grants, and all other payments not made on behalf of individual patients.

Formula 1

$$\frac{\text{Total Expenses}}{\text{inpatient days} + \text{outpatient visits} \; \dfrac{\text{outpatient revenue per outpatient visit}}{\text{inpatient revenue per inpatient day}}}$$

which is equivalent to

Formula 2

$$\frac{\text{total expenses} \; \dfrac{\text{inpatient revenue}}{\text{total patient revenue}}}{\text{inpatient days}}$$

Number of Beds in For-Profit, Non-Profit and Government Administered Community Hospitals in Nevada 1975 to 1984

CRIME AND CORRECTIONS

Crime statistics are reported by the U.S. Department of Justice in a "crime index," which gives a reliable indication of criminal activity. The crime index measures the number of crimes reported to law enforcement agencies as calculated per 100,000 population.

For four consecutive years beginning in 1981, the crime index declined in the U.S. The index dropped from 5,950.0 in 1980 to 5,031.3 crimes per 100,000 population in 1984, a decline of 18.3 percent. In 1985, however, a reversal of that trend took place. The overall crime index increased by 3.5 percent to 5,206.5. A view over the past ten years indicates the crime index has decreased by 1.5 percent. The major reasons for this were decreases in burglary, larceny-theft and murder. On a discouraging note, forcible rape and aggravated assault both increased by some 30 percent during the same period.

Similarly in Nevada, the number of crimes per 100,000 population reported to the police also decreased. Between 1980 and 1984 the crime index for the state dropped by some 35 percent to 6,561. While this trend also reversed in Nevada in 1985, the increase in the crime rate was a scant 0.2 percent.

Considering a ten year time frame, the crime index in Nevada has shown a substantial decline. All categories of crime, with the exception of forcible rape, have declined. Overall, the crime rate decreased by 20.8 percent, with property crimes decreasing by 22.4 percent and violent crimes decreasing by 3.5 percent.

Despite the significant drop in the crime index in Nevada over the past ten years, in 1985 the state still ranked fifth highest in the nation on the index. Of the categories of crime comprising the index, Nevada ranked third in forcible rape, fourth in burglary, eighth in robbery, ninth in larceny and murder, eleventh in motor vehicle theft, and twelfth in assault.

The crime rate in Nevada has resulted in a large number of persons being sentenced to prison. In 1985, Nevada led the nation in the rate of sentenced offenders in state and local institutions with 412 prisoners per 100,000 population. The next closest rate was 308 in Louisiana. Of note, the Nevada rate was more than twice the national rate of 201. Nevada's jails also rank high in the number of inmates. In 1985, the average daily population (per 100,000) of jail inmates was 107, ninth highest in the nation.

Not surprisingly, Nevada had the highest number of persons working in the justice system, with 67.0 FTE employees per 10,000 population in 1983. Comparatively, the national average was only 47.8 FTE per 10,000 employees while the average for the western states was slightly more, 49.0.

Nevada ranked second (only to Alaska), in state and local criminal justice system expenditures in 1983 with $277.74 spent per person living in the state. This was nearly twice the national per capita expenditure of $148.86. Nevada also ranked first in the nation with the highest percentage of state and local budgets expended on justice activities. In fiscal year 1983, 9.9 percent of state and local direct expenditures went to criminal justice activities compared to only 6.2 percent nationally. The distribution of these expenditures between specific judicial activities in Nevada shows that police protection consumed 4.1 percent of state and local budgets (ranking Nevada second in the nation), judicial activities consumed 2.3 percent (ranking Nevada first) and corrections with 3.4 percent, again ranking Nevada first in the nation..

Technical Notes

Crime Index - Seven offenses (see below) are used to serve as an index to gauge the probable extent, fluctuations, distribution and rate of crime. The number of "actual offenses known" is reported regardless of whether anyone is arrested for the crime, or if stolen property is recovered, or prosecution is undertaken.

Murder and Non-Negligent Manslaughter - is the willful (non-negligent) killing of one human being by another.

Forcible Rape - is the carnal knowledge of a female forcibly and against her will. Assaults or attempts to commit rape by force or threat of force are also included; however, statutory rape (without force) and other sex crimes are not included.

Robbery - is the taking or attempting to take anything of value from the care, custody, or control of a person by force or threat or violence and/or by putting the victim in fear.

Aggravated Assault - is an unlawful attack by one person upon another for the purpose of inflicting severe or aggravated bodily injury.

Burglary - is the unlawful entry of a structure to commit a felony of theft. The use of force to gain entry is not required to classify an offense as burglary.

Larceny-Theft - is the unlawful taking, carrying, leading, or riding away of property from the possession or constructive possession of another. It includes crimes such as shoplifting, pocket-picking, purse-snatching, thefts from motor vehicles, etc., in which no use of force, violence, or fraud occurs.

Motor Vehicle Theft - is the theft or attempted theft of a motor vehicle, including the stealing of automobiles, trucks, buses, motorcycles, snowmobiles, etc.

Violent Crimes - are the offenses of murder, forcible rape, robbery and aggravated assault.

Property Crimes - are the crimes of burglary, larceny-theft and motor vehicle theft.

Direct Expenditures - comprise all expenditures except that classified as intergovernmental. It includes "direct current expenditures" (salaries, wages, fees, and purchases of supplies, materials, and contractual services) and "capital outlays" (construction and purchase of equipment, land and existing structures). Capital outlays are included for the year when the direct expenditure is made, regardless of how the funds are raised (for example, by bond issue) or when they are paid back.

Full-Time Equivalent Employment - is a computed statistic representing the number of full-time employees that could have been employed at the same total payroll cost, if all personnel were engaged on a full-time basis at the average monthly pay applying to full-time workers.

Police Protection - is the function of enforcing the laws, preserving order, and traffic safety. "Sworn" employees are those persons who have the power of arrest.

Corrections - is that function of government involving the confinement and rehabilitation of adults and juveniles convicted of offenses against the law and the confinement of persons suspected of a crime and awaiting adjudication.

Judicial Activities - encompasses all civil and criminal courts and activities associated with courts.

Legal Services and Prosecution - includes the civil and criminal justice activities of the attorneys general, district attorneys, State's attorneys, and their various named equivalents.

Parole - is the release of a person from prison by the Parole Board before that individual has completed his sentence. Parole is usually subject to specified conditions, usually including supervision by an appointed authority and is usually subject to revocation and imprisonment if the conditions are breached.

Probation - is the suspension of an active prison sentence by a trial judge. Probation is subject to specified conditions, usually including supervision by an appointed authority and is subject to revocation and imprisonment if the conditions are breached.

Capacity - is the number of beds or inmates assigned by a rating official to institutions within the state. The operational capacity is, however, the number of inmates that can be accomodated based on a facility's staff, existing programs and services. The design capacity, on the other hand, is the number of inmates that planners or architects intended for that facility.

GOVERNMENT AND TAXES

This section provides selected data on public revenues, expenditures and taxes in Nevada.

Federal Expenditures: The Consolidated Federal Funds Report Act of 1982 (P.L. 97-326) requires the Office of Management and Budget to prepare an annual report of available data on the geographic distribution (expenditures) of federal funds by state and territory. In 1984, the Bureau of the Census, the agency that actually prepares the data on federal expenditures, reported the federal government expended, for all states, a total of $725 billion dollars. Almost half of these expenditures (45 percent) went to individuals in the form of direct payments under federal entitlement programs such as Social Security, federal retirement, Medicare, etc. Federal expenditures for other major categories included contract awards (24.3 percent), federal grants to state and local governments (13.4 percent), and direct expenditures for federal wages and salaries (15 percent).

In 1984, the federal government spent $2.7 billion in Nevada. In terms of per capita expenditures this represented just over $3,000 for each state resident. Nationally, Nevada ranked fourteenth in federal per capita expenditures and among the twelve western states Nevada ranked fifth. Preliminary data indicates that in 1985 the federal government spent $3.87 billion in Nevada.

Federal funds allocated to Nevada generally paralleled the distribution of all federal funds nationwide. In 1984, entitlement payments comprised 42.1 percent of all federal expenditures in the state. Between the years 1981 and 1984, however, entitlement payments grew by 40 percent while entitlements payments nationwide grew by only 25.5 percent during this same period. The higher average annual growth of Nevada's population (3.5 percent) in comparison to U.S. growth (one percent) is generally responsible for the higher entitlement expenditures in Nevada.

In 1984, Social Security and Medicare represented the majority (66.7 percent) of entitlement payments to Nevadans followed by federal military retirement (12 percent) and civilian retirement (8.7 percent), respectively. The remaining combined federal entitlement payments for veterans programs, Food Stamp coupons, SSI benefits and social insurance for railroad workers totaled only 9.1 percent during the same period.

In 1984, the value of federal procurement contracts awarded in Nevada totaled nearly $800 million. On a per capita basis, this amounted to $879 for each Nevada resident compared to per capita expenditures nationwide of $736. In the years 1981 to 1984, federal procurement contracts awarded nationwide increased in real dollars (adjusted for inflation) by 18.7 percent, the rate of real growth in Nevada was 25 percent. During this same four year period, Department of Defense (DoD) contracts awarded in Nevada increased by over 65 percent and in 1984 they amounted to over $128 million. Comparatively, and over the same four year period, the growth in DoD contracts nationwide was only 42 percent. Preliminary federal expenditure data for fiscal year 1985 indicates that procurement contracts awarded in Nevada have increased to over $900 million. This increase represents a 14 percent growth in the value of contracts awarded in Nevada since 1984.

In 1984, 14 percent of all federal expenditures in Nevada were transferred as salaries to federal military and civilian employees. From 1981 to 1984, salaries paid to federal employees in Nevada (excluding the Postal Service) increased by $27.3 million or 7.6 percent, while the nationwide increase amounted to $12.3 billion or 16.6 percent. Although all federal employees enjoyed a 2.1 percent salary increase in real dollars (adjusted for inflation) during this period, it should be noted that because Nevada fared poorly in its share of actual salary growth, the state lost, in real terms, an estimated $21 million in federal salary expenditures.

Federal grants to states and local governments have declined in recent years. In 1981, the federal government transferred $94.8 billion in grants nationwide. In 1984, the figure was $97.2 billion, for a modest four year growth of 2.5 percent. In Nevada, and over the past four years, federal grant funds have declined by almost three percent. Preliminary data for 1985 indicates that in real dollars (adjusting for inflation), the state has lost over $22 million in the value of federal grants over the past five year.

State Expenditures: During the past six years (1980-1985) state government expenditures in Nevada increased by 30 percent adding nearly $200 million in total outlays. The 1985 per capita expenditure rate (per person) for state government was $895, up by $53 over the 1980 rate. This increase represented a combined growth of 6.3 percent over the six year period. After adjusting for inflation, however, per capita expenditures for state government actually declined by 18 percent. In general, Nevada's annual population growth and high rates of inflation, particularly during 1980 and 1981, were responsible for the declining rate of per capita expenditures.

Over the past several years, state expenditure priorities have remained relatively constant. Support for Nevada's educational system continues to dominate, costing each resident over $273 in 1985. In this same year, it cost each taxpayer $198 to support transportation services, $173 for health and social service programming, $91 for general government and $34 for the states criminal justice system. The combined annual per capita expenditure for 1985 for recreation and resource conservation programs, regulation of business, and debt services totaled just over $70 for each state resident.

It's worth noting, however, during this same six year period the changes in state expenditure priorities were related to general government services and the state's criminal justice system. In 1980 approximately 10.8 percent of all state expenditures went for general government (i.e. administration, offices of elected officials, etc.) and yet, by 1985, these expenditures declined to 6.3 percent. Support for the criminal justice system, however, increased during the same six year period from 4.0 percent to almost ten percent of total expenditures.

Between 1983 and 1985, non-gaming tax collections by state government increased by by almost 25 percent, adding nearly $114.7 million in total collections. The 1985 per capita collection rate (per person) for state government was $592, up by $85 over the 1983 level.

Outside of state gaming taxes, the sales tax, levied at an average rated of 5 3/4 percent, remains the main revenue producer with over $157.7 million collected in 1985. Over the past eight years (1978-1985), sales tax collections have out-paced inflation by 2.7 percent. Like sales taxes, the state's gas tax revenues have also out-paced inflation; in 1978 revenues collected from the gas tax totaled $35.9 million; in 1985 the collections rose to $80.6 million. Comparatively, cigarette and liquor taxes and net proceeds of mine tax have continued to remain static over the same eight year period.

The majority of the state's gaming industry is located in southern Nevada in the Clark County MSA, (i.e. metropolitan Las Vegas). Since the early 1970's the population in Clark County has varied between 55 and 60 percent of the state. Over the same period, however, gross gaming revenues earned by casinos in the county has varied from 65 to 67 percent.

Since 1979, most of the major growth in gaming revenues in Clark County have resulted from casino developments in Laughlin, Nevada. Laughlin is a border town approximately 95 driving miles south east of Las Vegas on the Colorado River. Between 1979 and 1985, Gross Gaming Revenues collected in Laughlin increased from $24.5 million to $160.2 million, an increase of over 500 percent. Outside of Clark County, Nevada's gaming industry is concentrated in Washoe County (Reno), Douglas County (Stateline Lake Tahoe) and in Carson City and Elko County.

In the period covering 1970 to 1985, Gross Gaming revenues collected by Nevada casinos increased from $575 million to over $3.3 billion for a average annual growth of 12.4 percent. The approximate combined tax rate levied against gaming revenues in Nevada is 7.5 percent, which in 1985 netted the state just over $248 million in gaming tax revenues. It is important to note, however, over the past 15 years, inflation rates and high population growth have eroded gaming tax revenues. Measured in per capita dollars and adjusting for inflation, gaming taxes over the period have actually grown little. In 1970, the per capita gaming tax collected was $84.48, while in 1985, after adjusting for inflation, the revenue had only increased by approximately nine percent to a per capita figure of $92.06.

TECHNICAL NOTES

Federal Expenditures - Federal expenditures not included in this section reflect data that could not be distributed by state and local governments or that were not available. Such expenditures include net interest on the federal debt, international payments and foreign aid, and operational expenses for selected federal agencies (e.g. Central Intelligence Agency, National Security Agency).

Federal Grants - Expenditures for grants represent actual cash outlays or payments made during the fiscal year indicated.

Federal Salaries and Wages - These data were taken from statistics provided by the Department of Defense (DoD) and the Office of Personnel Management. Again, all amounts represent outlays during the federal fiscal year indicated. DoD expenditures reflect gross compensation such as wages, housing allowances, and in general, all other personnel compensation. The data also reflect employment by duty station rather than by home residences.

Federal Procurement Contracts - Procurement amounts represent the value of obligations for contracts awarded to states, and do not necessarily reflect actual federal expenditures.

Data Comparability for Statistics on Federal Spending - In order to achieve data comparability for years 1981 to 1984, it was necessary to exclude all U.S. Postal Service expenditures from certain tables in this section.

State Sales and Use Tax - Two percent on all taxable sales and taxable items since originally enacted in 1955. Revenues are distributed to the state's general fund.

State School Support - The local school support tax is collected on a rate of 1.50 percent on taxable sales and items of use, with 99.50 percent of the revenues distributed to cities and counties of origin for local school support, and only .50 percent retained in the state's general fund.

County/City Relief Tax - The tax is collected on a rate of 1/2 of one percent of all taxable sales and items of use. 99.50 percent of the revenues are distributed by population ratio to cities and counties with only .50 percent retained in the state's general fund.

Supplemental County/City Relief Tax - This state tax was originally enacted by the 1981 State Legislature. The tax was designed to replace local property tax reductions; it is collected at a rate of 1.75 percent on all taxable sales and items of use. Revenues are distributed by formula based on local entity assessed value and property tax rates.

State Gas Tax Revenues - Tax revenues on gasoline are collected at 12.0 cents per gallon statewide. Counties have authority to raise the rate by four cents including an excise tax of one cent. The excise tax must be approved by local voters. Nevada's Constitution provides that proceeds from the gasoline tax must be used for purposes related to highway construction, maintenance and repair. The state's share of the gas tax is nine cents.

State Cigarette Tax - Revenues on cigarettes are collected at a rate of 15 cents per pack. A $150 license sales fee is also levied annually. Revenues are distributed to counties and cities by population ratio.

State Liquor Tax - Tax revenue on liquor is collected at varying rates according to alcohol content. Licensing fees vary for different products. Distribution of tax revenues is by population ratio.

State Gaming Taxes - Gaming taxes are collected by the state and by each county in the state. Because of the complexity of these taxes, the reader should refer to a publication entitled Gaming Nevada Style. The publication can be obtained from the Nevada Gaming Commission in Carson City, Nevada.

1984	245,892	4,157	2,611
1985	185,123	3,224	1,955

a) The net proceeds are determined by taking the gross yield, which is the value of minerals sold and produced, less certain deductions allowed by law. These deductions include expenses and depreciation related to the extraction or marketing of the mineral. The tax on net proceeds are then calculated at the same ad valorem rate as other properties in each respective taxing jurisdiction.

b) These data were deflated to 1978 constant dollars.

BANKING AND INSURANCE

Over the past few years, deregulation, both at the national and at the state level, has changed the financial service industry in this country. Recent passage of regional interstate banking legislation has resulted in one Nevada bank being acquired by a Utah bank. Indications are that other changes under this new law will take place in the near future, with Nevada institutions expanding out of state and other institutions expanding into Nevada. It would also appear that deregulation is responsible for the formation of regional banking services througout the west and country.

Financial Assets: Assets held in Nevada financial institutions totaled over $8.5 billion in 1983, for a per capita average of $9,486 for each state resident. Deposits in Nevada banks totaled some $6.89 billion the same year, representing a per capita average of $7,682 for each resident. Nevada ranked 37th in per capita assets and 36th in per capita deposits in 1983. Nevada's commercial banks hold the majority of the market share (60 percent) of assets in the state. It should be mentioned, however, credit unions hold 6.5 percent of the market with savings institutions holding over one third.

As of June 30, 1984 there were 14 banks with 195 operating branch offices in the state. All counties in Nevada, with the exception of Esmeralda County had a at least one operating bank office. There were some $ 4.44 billion in deposits in these banks.

Savings and Loan Association: There were five state chartered and two federally chartered Savings and Loan Associations in Nevada at the end of 1984, with a total of 99 branch offices. All but four Nevada counties had at least one Savings and Loan Association in their community. One new federally chartered association was licensed in Nevada in 1985. Although Nevada's Savings and Loan Associations have not been immune to the industry's recent problems, the financial health of the associations in general has been positive compared to other areas of the country.

Credit Unions: Although the number of credit unions in Nevada decreased from 69 in 1979 to 49 in 1984, credit unions nonetheless boast a large and growing membership. In 1984, nearly 26.8 percent of the state's population was associated with a credit union. This was up from 21.7 percent in 1979. Total assets in credit unions, while not a large fraction of the state's assets, have also been increasing steadily. In 1979, assets totaled $307.8 million; by 1984 assets had grown to $577.3 million, an increase of nearly 88 percent.

The small loan/finance company industry in Nevada has seen a resurgence, partially due to the combination of an improved economy and a recent change in regulations in the state which now permit a small loan company and a mortgage company to "share premises." There are now 13 of these companies with 33 offices. In 1985, small loan/finance companies generated $57.9 million in loans.

Thrift Companies: Three thrift companies currently operate approximately 20 offices in the state. Thrift companies in Nevada held approximately $146 million in assets at the end of 1985, with deposits totaling $118.5 million. Total assets in thrifts dropped some $20 million between 1984 and 1985 primarily because one thrift company merged with a savings and loan association.

There are currently 29 collection agencies licensed to do business in Nevada. These agencies typically handle the collection of delinquent accounts assigned by businesses of all types. There are currently four licensed debt adjusters in the state who primarily provide financial counseling and assist borrowers in better managing their funds. The state has two licensed Industrial Development Corporations, and ten companies licensed in the state as Issuers of Instruments for the transfer or moneys. There are 102 mortgage company licensees operating 116 offices throughout the state. These include both mortgage brokers and mortgage "bankers" who directly lend to the public.

TECHNICAL NOTES

Banking System - Banks in this country are organized under the laws of both the States and the federal government. "State-Chartered Banks" are supervised by officials of the respective states. "National Banks" are supervised by the Controller of the Currency.

Bank with Branches or Facilities - An institution that has a main banking office and one or more distinct physical premises or facilities that are extensions of the banking entity.

Branch - Any office of facility of a bank, including its main office, at which deposits are received, checks paid, or money lent even though some of these may not be defined as branches by state laws. A branch includes, but is not limited to, all of the following: drive-in facilities, seasonal offices, offices on military bases or government installations, paying\receiving stations or units, and non-deposit offices.

Transaction Account - is defined as a deposit or account on which the depositor or account holder is permitted to make withdrawals by negotiable or transferable instrument, payment orders of withdrawals, telephone transfers, or other similar devices for the purpose of making payments or transfers to third persons or others.

Non-Transaction Accounts - All deposits that are not transaction accounts (as defined above).

IPC - Individuals, Partnerships and Corporations.

F.D.I.C. - Federal Deposit Insurance Corporation

F.S.L.I.C. - Federal Savings and Loan Insurance Corporation

Public Funds - Transaction, demand and non-transaction accounts of governmental and quasi-governmental agencies.

Credit Unions - Not for profit financial cooperatives organized solely to meet the needs of their members. Membership is required and is either occupational based or community based.

Shares - Approximately equivalent to passbook savings accounts.

Dividends - Interest paid on savings or shares.

Life Insurance in Force - The sum of the face amounts, plus dividend additions, of life insurance policies outstanding at a given time. Additional amounts payable under accidental death or other special provisions are not included.

Premium - The sum paid for an insurance policy. "Net Premiums Written" represent premium income retained by insurance companies, direct of through reinsurance, less payments made for business reinsured. "Direct Written Premiums" are the amounts actually paid by policyholders.

Ordinary Life Insurance - Life insurance usually issued in amounts of $1,000 or more with premiums payable on an annual, semiannual, quarterly or monthly basis.

Group Life Insurance - Life insurance usually without medical examination, on a group of people under a master policy. It is typically issued to an employer for the benefit of employees, or to members of an association.

Industrial Life Insurance - Life insurance issued in small amounts, usually less than $1,000, with premiums payable on a weekly or monthly basis.

Credit Life Insurance - Term life insurance issued through a lender or lending agency to cover payment of a loan, installment purchase, or other obligation, in case of death.

Annuity - A contract that provides a periodic income at regular intervals for a specified period of time, such as for a number of years of your life.

a) Total insurance coverage of all legal reserve life insurance companies operating in Nevada.

b) Life insurance usually issued in amounts of $1,000 or more with premiums payable on an annual, semi-annual, quarterly or monthly basis. The term is also used to mean "straight life insurance."

c) Life insurance issued usually without medical examination on a group of people under a master policy.

d) Life insurance issued in small amounts, usually less than $1,000, with premiums payable on a weekly or monthly basis. The premiums are generally collected at the home by an agent of the company.

e) Term life insurance issued through a lender or lending agency to cover payment of a loan, installment purchase, or other obligation, in case of death.

TRANSPORTATION AND COMMUNICATIONS

Expenditures for state highways by the Nevada Department of Transportation reached record levels in fiscal year 1985. Nearly $190 million was spent on the maintenance, construction and administration of projects on state maintained highways in 1985, an increase of 25.6 percent over 1984.

There were only 17.3 miles of new roads added to the state highway system between 1984 and 1985. Roads in the state, however, have been receiving much more use in recent years. The annual vehicle miles for 1984 were 6.98 billion compared to 6.65 billion in 1983, a five percent increase.

The majority of Nevadans depend on the automobile for transportation. According to the 1980 Census, nearly 70 percent of all Nevadans in the work force drove alone to work. Another 19 percent drove to work in car pools. Thus, some 88.5 percent of the states' working population depended upon the automobile as their primary means of transportation to the job. Only 1.9 percent used mass transportation while 5.3 percent walked.

Motor vehicle registrations increased by approximately 11,300 between 1983 and 1985, while drivers licenses increased twice as fast during the same period. Nevadans tend to drive more trucks than the nation as a whole. In 1985, there were approximately 3.4 cars per every registered truck in the country while in Nevada there were only 2.8 cars per registered truck.

The number of fatal accidents per hundred million miles driven has declined significantly in Nevada since 1979, and while Nevada has consistently shown a higher fatal accident rate than the national average, the gap between the two has narrowed steadily over the past five years. In 1984, the rate of fatal accidents per 100 million miles driven was only 3.08 in Nevada compared to 2.54 nationally. In 1979, just five years earlier, the gap was much more pronounced with Nevada's fatality rate at 5.12 per 100 million miles compared to a rate of 2.97 nationally.

Nevada has also seen a dramatic decrease in the injury accident rate since 1979, dropping from 160.5 per 100 million miles driven in 1980 to 116.3 in 1984. Nevada's injury rate of 116.3 in 1984 marked the fourth consecutive year the rate has been below the national average. The overall rate for accidents in 1984 showed a decrease of 4.1 percent over the rate for 1983. The majority of accidents, as could be expected, occurred in the two most populous counties, Clark County and Washoe County. These two counties also had by far the highest accident rates per 100 million vehicle miles.

Traffic at both the McCarran and Reno-Cannon International Airports was up over 1984. McCarran saw 10.9 million passengers enplane and deplane in 1985, an increase of 7.7 percent over

1984, while Reno-Cannon saw 2.8 million passengers enplane and deplane for a more modest 0.2 percent increase over the same period.

In 1985, Nevada had over 50 newspapers and other publications with daily, weekly, or monthly circulation. During this period, the state supported 24 AM and 29 FM radio stations. In 1985, there were 14 television stations statewide with seventeen communities served by at least one cable television company.

TECHNICAL NOTES

Primary Highway System

Rural - The Rural State Primary Highway System is composed of all Interstate, U.S. and Nevada numbered highways, except those within areas designated by the U.S. Bureau of the Census as being urban.

Urban - The Urban State Primary Highway System is composed of all Interstate, U.S. and Nevada numbered highways or streets lying within those areas designated by the Census as urban.

Secondary Road System

Rural - The Rural Secondary Road System is composed of all state-maintained roads, except Interstate, U.S. and Nevada numbered highways, lying outside those areas designated by the Census as urban.

Urban - The Urban Secondary Road System is composed of urban extensions of the Rural Secondary Road System.

STOL Port - Short Take Off or Landing airport.

a) The classifications of Nevada's roads and streets used in this table are based on construction funds. The principle funds for construction of the Interstate System and the Federal Aid Systems are obtained from matched federal and State moneys. Non-Federal Aid Systems funds come from State, county or city funds or a combination thereof.

NOTE: These mileages are as of December 31, 1984.

ENERGY

The decade of the 1970's ushered in significant changes in how we view and utilize our energy resources. The oil embargo of 1973 set into motion a price spiral that more than doubled the price of petroleum products in a scant couple years. The subsequent embargo of 1979 further served to increase fuel prices, and prices continued to spiral until about the middle of 1983. Nevadans responded to these spiraling higher prices by implementing conservation measures and substantially reducing their energy consumption. Despite these efforts, however, Nevadans were still paying record amounts for energy in the early part of this decade.

The two major suppliers of electrical energy in Nevada are Sierra Pacific Power in the north, and Nevada Power in the south. As a direct result of the oil embargoes in the 1970's, the cost per kilowatt of electricity for a Sierra Pacific Power customer rose 51.9 percent faster than the rate of inflation between 1973 and 1983. For Nevada Power electric customers, the cost per kilowatt rose 86.6 percent faster than the rate of inflation for the same period. In actual dollar amounts, the average annual bill for a Sierra Pacific Power customer rose from $238.92 in 1970 to $632.32 in 1983 while the average annual bill for Nevada Power customers rose from $210.95 in 1970 to $708.55 in 1983.

Consumers of natural gas did not fare much better. In the five year period between 1978 and 1982, both northern and southern Nevada gas bills increased over 40 percent above the rate of inflation. In actual dollar amounts, northern Nevadans had an average annual bill of $274.10 in 1978 and $544.20 in 1983. Southern Nevadans bills were slightly lower with the average annual bill in 1983 at $439.54, up from $217.06 in 1978.

During the past several years, Nevadans have benefited from stabilized energy prices. While the rate of inflation for the period 1983-1985 was eight percent, the cost of electricity for Nevada Power customers increased by only 7.6 percent, and Sierra Pacific Power customers saw their rates increase by only 6.4 percent. Similarly, customers of natural gas have seen an easing of their gas bills. In northern Nevada, the average cost per MCF of gas billed was $6.65, down from a high of $6.91 in 1983. In southern Nevada, gas rates increased approximately at the same rate as inflation.

The rapidly escalating energy prices of the 1970's and early 1980's have played a significant role in reducing energy consumption in Nevada. Between 1978 and 1983, per capita energy consumption as measured in BTUs showed a steady decline each year. Overall, per capita consumption of energy dropped from a high of 411.4 BTUs in 1983, to 323.5 BTUs in 1983, a decline of 27.2 percent. Of note, with the stabilization of energy prices in

1984 also came an increase in the consumption of energy. Between 1983 and 1984, energy consumption rose five percent to 340.0 BTUs per capita.

In the residential sector, the average annual consumption of electricity per household has declined steadily since peaking in 1973. Nevada Power customers used 27.2 percent less electricity in 1985 than in 1973, despite a slight increase in consumption between 1983 and 1985. Sierra Pacific Power customers cut their consumption by nearly 13.4 percent between 1973 and 1985. While natural gas consumption is more erratic due to dependence on weather-related factors, conservation efforts also appear to be taking effect as consumption has not exceeded 100 MCF per household as it often did prior to 1978.

The great strides in reducing the average mile per gallon figures for the nations fleet of vehicles was evident in Nevada also. During the period between 1978 and 1985, motor fuel consumption increased by less than one half of one percent, despite a relatively large increase in the state's population, and a large increase in the number of vehicle miles driven on Nevada roads. Specifically, Nevada gasoline stations sold 518.6 gallons of gasoline per capita in 1985, approximately 25 percent less than the 700.7 gallons sold in 1978. The use of Nevada's roads increased by over 21 percent during this same period, jumping from 5,750 million miles traveled in 1978 to 6,980 million miles in 1985.

TECHNICAL NOTES

Btu - Abbreviation for British Thermal Unit, is the quantity of heat necessary to raise the temperature of one pound of water one degree Fahrenheit. All fuels have an average Btu content and thus Btu is often used as a standard for measuring and comparing fuel consumption, especially among dissimilar fuels.

Kwh - Abbreviation for kilowatt hour, is the amount of electrical energy consumed with a one thousand watt demand over a period of one hour.

MCF - Abbreviation for 1,000 cubic feet.

Natural Gas - A gaseous combustible mixture of several hydrocarbons (including methane, ethane, propane and butane) and minute amounts of other compounds.

Annual Per Capita Consumption of Energy in Nevada a)
1970 to 1984

Year	Population	Energy Consumption (Trillion Btu)	Per Capita Consumption (Million Btu)	Per Capita Annual Percent Change
1970	488,738	184.4	385.7	-
1971	520,000	195.8	386.0	0.1%
1972	547,000	211.4	397.1	2.9
1973	569,000	228.6	411.4	3.6
1974	597,000	228.9	392.1	-4.7

1979	765,000	297.5	396.9	-1.0
1980	800,508	288.5	368.1	-7.3
1981	852,220	280.3	337.6	-8.3
1982	886,560	282.8	327.0	-3.1
1983	912,444	295.2	323.5	-1.1
1984	937,150	310.1	340.0	5.1

a) Includes all forms of energy (i.e., natural gas, electricity, motor fuel and other petroleum products; wood, coal and geothermal). Excludes wood, geothermal, biomass and waste energy consumed by non-utility sectors, and small quantities of other energy for which historical data is not available, such as solar energy and wind energy.

NOTE: States are in rank order, lowest to highest, according to 1985 average bill. The rank order represents percent of increase, highest to lowest, among western states. Thus, Nevada had the seventh highest electric bill of the 13 states, and the seventh fastest growing.

1971	157.95	151.63	-3.2%	162.75	156.24	-4.5%
1972	168.75	156.94	0.2	178.50	166.01	1.5
1973	170.10	147.99	-5.5	182.25	158.56	-3.0
1974	221.40	174.91	11.7	211.50	167.09	2.2
1975	265.95	191.48	22.3	261.75	188.46	15.3
1976	321.30	218.48	39.5	308.25	209.61	28.2
1977	380.70	243.65	55.6	366.00	234.24	43.2
1978	399.60	239.76	53.1	360.00	216.00	32.1
1979	427.95	226.81	44.8	374.25	198.35	21.3
1980	554.85	260.78	66.5	489.00	229.83	40.6
1981	550.80	236.85	51.3	539.25	231.88	41.8
1982	660.15	264.06	68.6	576.75	230.70	41.1
1983	711.45	277.47	77.2	620.25	241.90	48.0
1984	710.10	262.74	67.8	629.25	232.82	42.4
1985	765.45	275.56	76.0	660.00	237.60	45.3

a) The average annual cost in current dollars was derived by multiplying the average cost per kWh for each year by a fixed representative kWh consumption; 13,500 kWh for Nevada Power Company customers and 7,500 kWh for Sierra Pacific Power Company customers.

b) A Consumer Price Index (CPI) deflation factor was used to convert the average annual cost in current dollars to 1970 constant dollars.

c) Cumulative percent change indicates the percent increase or decrease, in 1970 constant dollars, from the 1970 base year. It is a measure of the increase in electric costs aside from the effects of inflation.

NOTE: The cost in current dollars is not the average bill for the designated year but rather is representative of the billing cost for a fixed amount of energy. While this method somewhat discounts the decreases in electric bills due to conservation efforts, the standardization makes all bills directly comparable for constant dollars.

(-) No data given.

a) Alaska and Wyoming are not included due to their limited number of privately owned electric utilities.

b) Rank for Western States only.

NOTE: The "Dollars" column represents the total expenditures on Research, Development and Demonstration by privately owned utilities operating in the states as listed. The "Percent" column compares the expenditures of dollars for R & D (shown) to the operating revenue (not shown) of the privately owned utilities in their respective states.

LAND TENURE AND GEOGRAPHY

Nevada is the seventh largest state in the nation, covering a total of 110,540 square miles. The majority of central and eastern Nevada lands lie in the Great Basin, which is characterized by isolated mountain ranges separated by vast valleys. The highest elevation in the state is Boundary Peak at 13,140 in Esmeralda County, and the lowest is 490 feet on the Colorado River in Clark County.

Nevada lies in the rain shadow of the Sierra Nevada Mountains, and thus, precipitation, with few exceptions, is light. Rain and snow fall mostly from December through May, with sporadic summer thunderstorms occurring especially in the southern portion of the state. Daily temperature changes are large, averaging 45 degrees statewide. Temperatures differ greatly between the various regions of the state, with summer daytime highs consistently hovering around 105 degrees in southern Nevada while winter evening temperatures are usually around freezing in the northern portions of the state.

Nevada hosts two National Forests. The Toiyabe National Forest is comprised of 3,171,705 acres, with 80 percent of the forest located in Nevada. The Toiyabe National Forest straddles the California/Nevada state line, extends eastward into the central portion of the state and south to Mt. Charleston, approximately 45 miles northwest of Las Vegas. The Humboldt National Forest comprises 2,527,929 acres, all of which are in Nevada. The Humboldt extends southward from the Idaho border, along the north central portion of Nevada, to 130 miles north of Las Vegas in southeastern Nevada.

It is the Bureau of Land Management, however, that is the dominant land holder in the state. Over 48 million acres of Nevada lands are under the direct management of the Bureau of Land Management.

All counties in the state (with the exception of Storey County) have a large percentage of land in federal ownership. Excluding Storey County, Douglas County has the least amount of federal lands with 37.2 percent, while Esmeralda County has the greatest amount with 96.8 percent. Overall some 85.3 percent, or nearly 60 million acres of Nevada's lands are federally controlled. Only three other states in the nation have federal land ownership over 50 percent, and only Alaska has more federally controlled land than Nevada.

Nevada is host to the largest population of wild horses in the United States. In 1986, there were an estimated 30,424 wild horses in Nevada, most of which were located on BLM lands. The wild horse herds range over some 20 million acres in the state.

Statistics on fire suppression on lands in Nevada are incomplete. Fire actions by the BLM in fiscal year 1985, however, indicate that the 1985 fire season was the worst in recorded history. The 1985 fire season for BLM involved over 870 fires burning more than 885,000 acres. An average fire season for the BLM is 450 fires with 60,000 acres burned.

TECHNICAL NOTES

The information included in this section is intended to give the reader a general knowledge on land ownership in Nevada. The tables, while reflecting the most accurate information available, do present several shortfalls about which the reader should be aware .

The last year information was available for the table on page 399, "Tax Exempt Lands by County by Acre," was fiscal year 1976. This table, though dated, is included in this report as it provides the only available complete overview of lands owned by federal, state, county and Indian entities. The reciprocal to this, the table on page 398, "County Acreage on Tax Rolls," had been previously included in the Abstract under several definitions of classified lands. For consistency and comparability with the table on page 399, this Abstract has returned to using the fiscal year 1986 data with the definition as noted.

The table on page 396, "Federally Owned Land in Nevada...," provides an accurate description of land ownership by agency, but is not available by county breakdown. The table on page 400, "In Lieu Tax Payments...," does provide a county breakout, but only for selected lands. This table reports only lands withdrawn pursuant to Public Law 91-565, so not all federal lands are reported in this table.

One other area of concern regarding any acreage figures in Nevada needs to be recognized. There are still over 19 million acres of Nevada that have not been surveyed. Thus, the division of larger tracts of land, such as between counties, may actually only represent approximate acreages. Changes in acreage may occur when actual survey results become available.

Public Domain Lands - The original lands the federal government controlled that have never left their control. "Public domain lands" also are those lands in federal ownership which were obtained by the government in exchange for public domain lands or for timber on public domain lands.

Acquired Acres - Lands in federal ownership which were obtained through purchase, condemnation or gift, or by exchange for such purchased, condemned, or donated lands, or for timber on such lands.

Wild Free-Roaming Horses and Burros - All unbranded and unclaimed horses and burros using public lands as all or part of their habitat.

Animal Unit - A standardized unit of measurement for range livestock which is equivalent to one cow. One cow = one horse = five sheep = five goats = four reindeer all over six months of age.

Animal Unit Month (AUM) - A standardized unit of measurement of the amount of forage necessary for the complete sustenance of one animal unit for a period of one month. It is also a unit of measurement of grazing privileges which represents the privilege of grazing one animal unit for a period of one month.

Comparison of Federally Owned Land with Total Acreage of Western States Fiscal Year 1984

State	Acreage Owned By The Federal Government			Acreage Not Owned By The Federal Government	Acreage of State	Percent Owned By Federal Government[a]	Rank

a) Land withdrawn pursuant to the Recreation and Public Purposes Act of June 14, 1926, as amended.

b) County totals may not equal State total due to rounding.

NOTE: The information in this table is no longer separately tabulated by the Nevada Department of Taxation. However, because the federal government is still the major landholder in Nevada, this table, although somewhat dated, is included. While there have been a number of land transfers from the federal government to Nevada, this table still reflects an accurate approximation of land ownership in the State.

MINERALS

Nevada's mineral production continues to play an important role in the state's economy. The production value of minerals in Nevada in 1984 was $616 million, an increase of 18 percent over 1983. This large increase in value was due primarily to the mining of gold.

In 1984, the U.S. Bureau of Mines estimated the state's gold production at over 997,000 troy ounces, 297,000 more that in 1983. The value of gold mined during this period increased from $311 million to over $359 million, an increase of 15 percent. Silver also experienced a sharp increase growing in production value from $34.0 million in 1983 to $52.7 million in 1984.

It should noted, however, in recent times not all of the minerals produced in Nevada fared as well. Between 1979 and 1984, barite production declined by approximately 60 percent. Although Nevada does remain the number one producer of barite in the nation (85 percent), recent declines in domestic drilling for oil have reduced overall demand for this mineral.

At the national level, Nevada is the number one producer of a number of minerals. Nevada ranks number one in the percent output of barite (85 percent), gold (56 percent), magnesite (100 percent) and mercury (99 percent). Nevada is the number two producer in diatomite (35 percent), gemstones (15 percent) and lithium (35 percent).

Over the past two years, the oil industry in Nevada made significant progress in exploration, development and production. Combined oil production for the years 1984 and 1985 exceeded five million barrels, with over three million barrels produced in 1985 alone. The well head production value of oil produced in 1985 was worth approximately $55 million. Although Nevada only ranked 25th out of 30 oil producing states, the future for additional oil production is positive, in light of known source beds bearing hydrocarbons and complex geologic structures.

Nevada is generating approximately 25 megawatts per day of geothermal energy. The geothermal energy is produced at Beowawe in Lander County, Desert Peak in Churchill County and at Wabuska in Lyon County. It is hoped that in 1987, Dixie Valley in Churchill County, will generate an additional 50 megawatts per day of geothermal energy. According to the U.S. Geological Survey, the amount of potential energy that could be generated from geothermal power plants in Nevada is estimated at 2,000 megawatts of power. It should be noted here that Nevada is currently ranked second, only to the State of California, in its direct utilization of geothermal resources.

Mineral Production in Nevada[a]
1981 to 1985

Mineral	Unit	1981	1982	1983	1984	1985[b]
Barite	Thousand Short Tons	2,482	1,575	651	615	731

Oil Production in Nevada
Cumulative Data
1954 to 1985

(In 42 Gallon Barrels)

Well Field a)	Discovery Date	1983	1984	1985	Total Barrels Cumulative
Total		811,125	1,926,169	3,039,290	14,129,775
Eagle Springs	1954	71,789	69,670	58,807	3,780,649
Trap Spring	1976	492,752	522,789	582,548	6,291,188
Currant *	1972	--	--	--	641
Bacon Flat	1981	13,795	10,855	47,942	137,332
Blackburn	1982	67,600	156,246	284,246	522,320
Grant Canyon	1983	165,189	1,166,609	2,065,747	3,397,645

* The Currant field produced 641 barrels of oil in 1984 before it was shut in. The cost of diluting the thick oil was not economically feasible for continued production.

a) All of the above oil fields, with the exception of the Blackburn field, are located in Nye County; the Blackburn field is in Eureka County.

NOTE: There were 35 oil-producing wells in Nevada in 1983, 38 in 1984, and 44 in 1985. In 1985, the Trap Spring field had 28 wells, Eagle Spring contained eight, Blackburn contained four, Grant Canyon contained three, and Bacon Flat contained one.

AGRICULTURE

A large portion of Nevada is in the semi-arid Great Basin Region of North America, and thus, crop production in the state is limited. As the average annual precipitation in Nevada is only slightly more than nine inches, and the average annual growing season approximately 120 days, the primary agricultural activities in the state are limited to livestock and forage production.

The number of farms and ranches operating in Nevada declined from 2,721 reported in the 1978 Census of Agriculture to 2,399 in 1982. This same report shows the average size of farms also declined, dropping from 4,346 acres in 1978 to 3,658 acres in 1982. While new crop land came into production in 1982, it was more than offset by land consumed by urbanization and construction. The amount of land in farms fell from 10,813,610 acres in 1974 to 9,953,516 acres in 1982, a decline of 8.0 percent.

The 1982 Census of Agriculture indicates the leading county in market value of all agricultural products sold in the state was Humboldt County with $35.7 million in sales. Humboldt County accounted for 15.5 percent of the state's sales in 1982. Humboldt County was followed in sales by Elko County ($30.2 million), Churchill County ($30.0 million), Lyon ($25.8 million) and Pershing ($18.4 million). Combined, these five counties accounted for nearly 70 percent of the market value of agricultural products sold in Nevada. During the same period the counties having the largest sales of livestock products were Elko, Churchill, Lyon and Humboldt. Livestock production sales account for over 60 percent of the state's total agricultural sales.

The Nevada Crop and Livestock Reporting Service reports net farm income in the state totaled $19.3 million in 1984 compared with $60.8 million as recently as 1980. Increases in farm production expenses and net change in farm inventories were responsible for this sharp decline. The $19.3 million net farm income in 1984, however, was up slightly over 1983, and marked the first time since 1980 that net income did not show a decline.

The value of selected crops grown in Nevada totaled $138.0 million in 1984, down 14 percent from 1983. The value decrease was due to lower prices with hay prices decreasing 20 percent, potatoes 19 percent, spring wheat 18 percent, winter wheat 12 percent, barley 10 percent, and alfalfa seed four percent. All crops, with the exception of potatoes, garlic and onions, came in with production increases.

The total inventory of cattle and calves on January 1, 1985 stood at 620,000 head, down six percent from the previous year. Sheep and lambs totaled 100,000 head, down some three percent while pigs and hogs dropped from 14,000 in 1983 to 13,000 in 1984.

While inventory of livestock dropped across the board, cash receipts from the production of cattle and calves and sheep and lambs showed healthy increases between 1983 and 1984. Cash receipts for cattle and calves totaled $123.4 million in 1984, up 14.6 percent from the previous year and cash receipts from the production of sheep and lambs increased 12.5 percent to $12.9 million in 1984. During the same period, however, cash receipts from the production of hogs and pigs showed a decline of 8.4 percent.

Milk production continued to edge upwards as 1984 marked the sixth consecutive year that production increased over the previous year. Milk production on Nevada's farms and ranches in 1984 totaled 251 million pounds. Ice cream production totaled 1,473,000 gallons in 1984, up 10 percent over the previous year and ice milk production increased to 1,483,000 gallons, an increase of 11 percent over 1983.

TECHNICAL NOTES

The statistics used in this section were obtained from two separate sources and thus, may differ in some respects. The data used in Nevada Agricultural Statistics is furnished by the Economic Research Service of the U.S.D.A., Washington, D.C. These data, while collected every year, do not offer the breadth the Census of Agriculture does. The Census of Agriculture, which is collected every four years, however, is no longer an actual Census, as it is collected on a mailed questionnaire basis with an adjustment for non-response. Thus, the Census offers more information, but because of the incompleteness of data, Nevada Agricultural Statistics is more precise in what comparatively limited information it does report.

The most significant difference between the two reporting services occurs between "cash receipts from farm marketing" and "market value of agricultural products sold." While both primarily fall under the same definition, "cash receipts" report $241 million while "market value" is reported at $204 million. The difference is mainly due to the incompleteness of the Census data: adjustments are made for non-response, and the market value is estimated rather than actual. "Cash receipts" is also a little more extensive because it includes values other than just crops and livestock. Following are definitions of key terms used in this section.

Farm - The data shown represents totals for places or establishments which qualify as farms for Census purposes. A farm, as defined for the 1982 and 1978 Censuses, is any place from which $1,000 or more of agricultural products were sold, or normally would have been sold during the Census year. In 1974, a farm was defined as any place with less than 10 acres from which $250 or more of agricultural products were sold, or any place ten acres or greater from which $50 or more of agricultural products were sold.

It should also be noted, the state totals (number of farms) for 1978 have been adjusted to be comparable with the 1982 data. The 1978 data for the state, as published in the 1978 Census, were a combination of a mail list enumeration and a personal canvass. For 1982, the area sample survey was not conducted. Thus, the data represent only farms on the mail list. The adjustment to the 1978 data was made by subtracting the area sample results from the 1978 totals. County data for 1978 shown in the 1982 reports did not require adjustment as they were collected from the mail list, comparable to 1982. Dollar values have not been adjusted for changes in prior levels between Census years.

Crops - Includes nursery and greenhouse products, grains, cotton and cottonweed, hay, silage and field seeds, vegetables, sweet corn and melons, fruits, nuts and berries, and "other" crops. The 1974 data also includes forest products.

Livestock - Includes poultry and poultry products, dairy products, products, cattle and calves, sheep lambs and wool, hogs and pigs, and "other" livestock and livestock products.

Cropland - Includes land from which crops were harvested or hay was cut, land for pasture or grazing, in cover crops, etc.

Market Value of Agricultural Products Sold: This statistic represents the estimated gross market value, before taxes and expenses, of all agricultural products sold in the Census year, including livestock, poultry and their products, and crops.

Cash Receipts from Farm Marketing: This statistic represents gross receipts from commercial market sales as well as loans (net of redemption) made or guaranteed by the Community Credit Corporation and other purchases under price support payments.

APPENDIX A

Current and Constant Dollars: Current dollars figures reflect prices prevailing during the specified period. Constant dollar figures are computed values which eliminate the effect of price changes and are derived from prices of a specified base period. The constant dollar values are obtained by dividing current dollar values for a given period by the price indexes for the same period. The price index used in the Nevada Statistical Abstract is the Consumer Price Index for the United States.

Consumer Price Index	
1970	116.3
1971	121.3
1972	125.3
1973	133.1
1974	147.7
1975	161.2
1976	170.5
1977	181.5
1978	195.4
1979	217.4
1980	246.8
1981	272.4
1982	289.1
1983	298.4
1984	311.1
1985	322.2

STATE OF NEVADA

RICHARD H. BRYAN
Governor

JEAN FORD
Director

OFFICE OF THE GOVERNOR
OFFICE OF COMMUNITY SERVICES
Capitol Complex
Carson City, Nevada 89710
(702) 885-4420

DATE: January 7, 1987

TO: All Users of the 1986 Nevada Statistical Abstract

FROM: John B. Walker

SUBJECT: 1986 Official State Population Estimates

Enclosed are the State of Nevada 1986 Official Population Estimates for counties and cities. The estimates were prepared cooperatively by the Nevada Office of Community Services and and the University of Nevada-Reno, Bureau of Business and Economic Research.

Please replace the population estimates on page 40 in the population section of the Abstract with the attached estimates. The attached estimates supercede all others previously released by this office.
